**Abstract**
Recently, the accuracies of many commercially available immunoassays for Vitamin D have been questioned. Liquid chromatography tandem mass spectrometry (LC-MS/MS) has been shown to facilitate accurate separation and quantification of the major circulating metabolite 25-hydroxyvitamin-D3 (25OHD3) and 25-hydroxyvitamin-D2 (25OHD2) collectively termed as 25OHD. However, among other interferents, this method may be compromised by overlapping peaks and identical masses of epimers and isobars, resulting in inaccuracies in circulating 25OHD measurements. The aim of this study was to develop a novel LC-MS/MS method that can accurately identify and quantitate 25OHD3 and 25OHD2 through chromatographic separation of 25OHD from its epimers and isobars. © The Authors.

**Abstract**
An Agilent ZORBAX Rapid Resolution High Definition Eclipse Plus C18 column was used in an Agilent LC/MS system, comprising an Agilent 1290 Infinity LC coupled to a 6540 Accurate-Mass Q-TOF MS, for the analysis of a Chinese medicine. Published by Elsevier B. V.
