**NOW EXPANDED FDA APPROVAL**

**PD-L1 IHC 22C3 pharmDx identifies KEYTRUDA treatment options for metastatic NSCLC patients**

PD-L1 22C3 IHC pharmDx is the only companion diagnostic approved by the FDA as an aid in identifying metastatic NSCLC patients for treatment with KEYTRUDA® (pembrolizumab) across all lines of therapy.

Incorporate PD-L1 IHC 22C3 pharmDx into your diagnostic lung panel to provide clinically relevant results linked to patient outcomes.

- High-quality staining results optimized for treatment selection
- Clinically validated scoring guidelines
- Quality assured, all-inclusive kits with control slides
- Comprehensive Interpretation Manual and eLearning

**Add PD-L1 IHC 22C3 pharmDx to your lung panel to inform treatment options for metastatic NSCLC patients**

Tumor Proportion Score ≥ 50%. Oncologist to consider KEYTRUDA for metastatic NSCLC patients*

Tumor Proportion Score ≥ 1%. Oncologist to consider KEYTRUDA for previously treated metastatic NSCLC patients*

* See the KEYTRUDA product label for expression cutoff values guiding therapy in specific clinical circumstances.

KEYTRUDA is a registered trademark of Merck Sharp & Dohme Corp., a subsidiary of Merck & Co., Inc.
Experience easy integration of PD-L1 testing in your IHC workflow

- Ready-to-Use reagents optimized for Autostainer Link 48
- Cell line controls for enhanced confidence in results
- Results can be available within one working day

PD-L1 IHC 22C3 pharmDx is a complete diagnostic kit

- 50 tests included
- 15 control slides

### Intended Use

For in vitro diagnostic use.

PD-L1 IHC 22C3 pharmDx is a qualitative immunohistochemical assay using Monoclonal Mouse Anti-PD-L1, Clone 22C3 intended for use in the detection of PD-L1 protein in formalin-fixed, paraffin-embedded (FFPE) non-small cell lung cancer (NSCLC) tissue using EnVision FLEX visualization system on Autostainer Link 48. PD-L1 protein expression is determined by using Tumor Proportion Score (TPS), which is the percentage of viable tumor cells showing partial or complete membrane staining at any intensity. The specimen should be considered to have PD-L1 expression if TPS ≥ 1% and high PD-L1 expression if TPS ≥ 50%.

PD-L1 IHC 22C3 pharmDx is indicated as an aid in identifying NSCLC patients for treatment with KEYTRUDA® (pembrolizumab). See the KEYTRUDA® product label for expression cutoff values guiding therapy in specific clinical circumstances.
