NOTE

Agilent Instrument Control Framework offers a fixed set of supported modules with the required configuration, control and method parameters.

- Depending on the hosting CDS and its configuration some of the functionality may not be available.
- ICF provides techniques and/or functionality which may require specific features (e.g. FLD Spectra require 3D Data Evaluation) for data evaluation and reporting.

Please contact your Data System provider or check the Data System Provider release notes, if there are known limitations or restrictions.

NOTE

Following rules apply to run Agilent LC/CE and GC instruments in a non-Agilent Chromatography Data System (CDS).

- The 3rd-party CDS software vendor is responsible for compatibility testing with the respective CDS revision.
 - The 3rd-party CDS software vendor defines the minimum firmware revision required for CDS compatibility.
 - The 3rd-party CDS release notes issued by the respective CDS vendor may use different terminology for the firmware requirements such as "tested firmware", "supported firmware", "firmware requirements", "minimum tested firmware", etc.
-

NOTE

Additional Agilent LC Firmware Set Interoperability and Support Statement:

- An Agilent LC instrument running a current firmware set is fully supported as long as it meets or exceeds the minimum firmware requirements specified by the 3rd-party CDS software vendor and meets Agilent's firmware set/firmware interoperability requirements.
 - Agilent releases LC firmware updates as so-called "firmware sets".
 - All Agilent LC instrument firmware sets have been designed and tested to be truly and strictly backward compatible to the installed software base (CDS).
 - The module firmware contained in each set is fully compatible and interoperable with all other module firmware of the same set.
 - Agilent recommends using always the latest module firmware revision of a firmware set in order to avoid interoperability issues.
 - Generally, Agilent recommends keeping the LC instrument firmware always current.
 - Do not mix firmware revisions between different sets. Agilent does not guarantee mixed firmware revisions from older or newer sets.
 - If you have to document the firmware revision (for validation reasons) please use the term "Revision XXX or later" or "Firmware from Set XXX or later". This might help on discussions in case of required updates due to malfunctions that have been corrected in later releases.
-

NOTE

Agilent GC Firmware Interoperability and Support Statement:

- Agilent releases GC firmware updates independently of software releases.
 - All Agilent GC instrument firmware revisions have been designed and tested to be backward compatible to the installed software base (CDS).
 - Agilent recommends always using the latest module firmware revision in order to avoid interoperability issues.
 - Generally, Agilent recommends keeping the GC instrument firmware current.
