

Agilent Mass Spectrometry and Automation Compliance Offerings

Overview

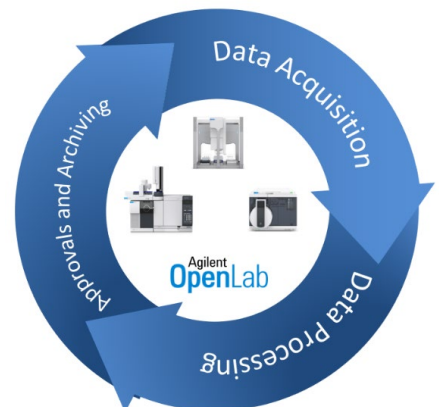

Credible lab results depend on the quality and reliability of your data no matter what industry your lab services. The complexities of ensuring data integrity can be overwhelming when operating in a global economy. In a pharmaceutical company, the foundations of data integrity go across all elements of the organization so that the right instrument, the right analytical procedure, the right data analysis, and the right quality oversights are in place. While compliance was historically only a pharmaceutical lab requirement, data integrity is increasingly crucial across many industries.

Key technological features:

- MassHunter Acquisition for 6400 Series Triple Quadrupoles and Ultivo LC/TQ, GC/MS MassHunter for GC/MSD and 7000 Series GC/TQ, and MassHunter Quantitative Analysis provides user management, checksums, tamper detection and audit trails when implemented with OpenLab ECM.
- MassHunter for LC/TOF and LC/(Q)TOF systems for use in regulated biopharmaceutical markets will be available in the near future.

Key uses:

- Regulated laboratories processing samples where data integrity is a regulatory requirement.
- Other industries requiring data integrity including food safety, forensic toxicology, environmental, and chemical production.

Key technological features:

- OpenLab ECM is a comprehensive enterprise content management system where data from any technology or vendor as well as documents used in your lab can be securely stored in a central location while ensuring timely approvals, customization of tasks, and lab-wide reports.
- VWorks 14.0 WorkStation Plus introduces compliance enabling features built upon Agilent's OpenLab Shared Services platform.
- VWorks 14.0 Workstation Plus provides: user management that can be integrated with Windows Active Directory; compliance enabling features such as content management, checksums, tamper detection and audit trails for records of interest
