Triamcinolone is a corticosteroid, hence an anti-inflammatory drug, used in combination with other pharmaceuticals in ointments and creams for the treatment of skin eruptions and rashes. It is also used as a single drug product for the treatment of severe bronchial asthma. Triamcinolone was one of the top 30 prescribed generic drugs in 1994.

Highlights

• ZORBAX columns can be substituted for µBondapak without compromising the USP criterion that “the resolution factor between triamcinolone and hydrocortisone is not less than 3.0.”

• ZORBAX Rx-C18 and SB-C18 both give improved performance demonstrated by higher theoretical plate count as compared to µBondapak.

• Highly efficient chromatography and quantitation is easily achieved with both ZORBAX Rx-C18 and SB-C18.

Conditions:
ZORBAX Rx-C18, SB-C18 (4.6 x 250 mm) (Agilent P/N: 880975-902, 880967-902)
Mobile Phase: Water: MeOH, (40:60)
Injection: 10 µL, 1.5 mL/min, Ambient, Detect. UV(254 nm)
Robert Ricker is an application chemist based at Agilent Technologies, Wilmington, Delaware.
