Introduction
A set of three Agilent PLgel MiniMIX-B columns is ideal for routine analyses of polystyrene in tetrahydrofuran.
This sample has $M_w=250,000$ and $M_n=100,000$, and some low molecular weight components are detected with a UV at 254 nm.

PLgel 10 µm MiniMIX-B columns are designed for high MW polymer analysis and demanding eluent conditions. The PLgel 10 µm MiniMIX-B spans a wide range of molecular weights, up to 10 million, with a linear calibration curve. It is particularly useful for molecular weight distributions where slightly higher than average MWs are encountered. The 10 µm particle size provides good resolution with relatively low pressures for enhanced lifetimes in demanding conditions.

**Conditions**

Column: 3 x PLgel 10 µm Mini-MIX-B, 300 x 7.5 mm (part number PL1510-5100)

Eluent: THF

Flow Rate: 0.3 mL/min

Detection: UV, 254 nm
