

Tomorrow's Scientists Program

Transforming the learning experience

"Instruction does much, but encouragement everything." wrote J.W. Goethe to A.F. Oeser in 1768, and this is still true today.

Therefore, Agilent has expanded the Tomorrow's Scientists Program to help teachers create exciting curricula for students studying biology, chemistry, life sciences, and related fields.

Innovative teaching tools are available to transform your students' lab course experience from passive to fully active, from "fixed to class" to anywhere, and from theory to applied usage.

The program also provides special offers to use industry-standard laboratory instruments including spectrometers, chromatography and mass spectrometry systems.

Agilent instruments are reliable and robust, and therefore the ideal choice for multi-user environments. OpenLAB CDS software is scalable and supports all chromatography systems. Free data analysis licenses for teaching are available. The OpenLAB CDS client/server system is an interesting alternative for classes with three or more instruments since it allows centralized instrument management and system administration.

Special Offers For Academia

Teachers or instructors responsible for teaching classes in biology, chemistry and related fields may qualify for special teaching discounts:

- Discounted pricing on teaching lab equipment
- Multiple free data analysis licenses with the purchase of the operating software.

Transform your students' learning experience

The Agilent Tomorrow's Scientists Program offers many innovative tools to enhance your curriculum and keep your students engaged.

Program Highlights

Free data analysis software	Allows students to analyze data, anywhere
Free 5-year access to CHROMacademy	Point your students to validated content with interactive tools
Virtual HPLC	3D insight of an HPLC system
Free HPLC Simulator	Simulate chromatographic conditions in real time
Videos	Take your students on a journey through a mass spectrometer
Visit Agilent	Treat your students to an exciting and informational day with Agilent

How does it work?

Teachers and instructors who are responsible for preparing lab classes may qualify for special discounts on instruments and software.

Visit www.agilent.com/en/academia/education/tsp to see how we can help you and to apply for special financial support.

Your budget and time goes further with Agilent

Agilent offers special teaching discounts on your next instrument purchase. With the investment into an Agilent instrument additional values are included such as

- Confidence in a future-proof investment that you can upgrade module-by-module over time or mix modules from different Agilent LC series and systems
- One software for LC, GC and single quad mass spectrometer means less preparation and training time and faster familiarisation
- Multiple free data analysis licenses for students' computers
- Tips & tricks videos and webinars for optimising your setup
- Self-maintenance tools reduce maintenance costs
- Proven industry standard equipment better prepares students for their future jobs
