Save Time by Streamlining Quality Control

Agilent OpenLab CDS MatchCompare A.01.03.1
Make Quick, Rigorous Comparisons Between Standard and Reference Chromatograms

Agilent OpenLab CDS MatchCompare automates the time-consuming task of comparing quality control chromatograms. Originally developed to help chromatographers identify small differences between two chromatograms, it is also applicable to a wide range of samples where an overall “A/B” comparison is desired.

By objectively comparing unknown samples to a known standard, MatchCompare quickly identifies similar chromatographic peaks between two chromatograms, and compares areas against predetermined ranges. This quality control process provides higher throughput for many GC and LC applications.

In addition to quantifying individual components, chromatographers must frequently compare two different samples, or a sample to a reference, focusing on the overall chromatogram fingerprint. Typically, this is achieved by overlaying the chromatograms to manually examine the chromatographic traces and judge how well the two chromatograms match. This method provides a subjective comparison, which relies on years of training and experience.

Make comparisons based on retention index with OpenLab CDS 2

Agilent OpenLab CDS MatchCompare A.01.03.1 offers compatibility with OpenLab CDS 2.x while retaining compatibility with Agilent ChemStation and Agilent EZChrom Editions. When combined with OpenLab CDS 2, OpenLab CDS MatchCompare uses the custom calculator feature to enable comparisons based on both retention indices and retention times.

Highlights:
- Integrate seamlessly with OpenLab CDS
- Quickly identify and match peaks between two complex samples
- Monitor product content uniformity by peak area comparison
- Save time with automated product-conformity reports
- Increase efficiency by eliminating reference sample reinjection
Compare Major Components and Trace Compounds

One of the most important features of MatchCompare is its ability to compare both major components and trace compounds. This capability makes the application an ideal tool for any screening application where consistency is critical.

Applications include:
- Flavors and fragrances
- Screening of incoming raw materials
- Dyes and volatile colorants
- Adulteration or contamination monitoring
- Peptide mapping
- Detailed hydrocarbon comparisons

You can easily compare the chromatogram of an unknown sample with a reference chromatogram. This offers you a significant advantage by providing quantitation of individual compounds using OpenLab CDS, and a description of the true nature of the sample with OpenLab CDS MatchCompare.

The Agilent OpenLab MatchCompare comparison screen clearly shows differences between reference and sample chromatograms.
Increase your productivity
A powerful, intelligent algorithm handles peak distortions, scaling, retention time shifts, and changes in experimental conditions. Using a single reference chromatogram, samples are quickly and easily compared for quality assurance, reducing the need for frequent reference sample reinjections.

Automatically match peaks
Graphically referenced matched peaks allow retention time shifts of up to several minutes without changing search fidelity. Missing peaks or impurities are represented by different colors—both onscreen and in the report—eliminating errors and speeding data review.
Quickly monitor product quality

OpenLab CDS MatchCompare identifies user-defined area percent tolerance limits for each peak of the reference chromatogram. Area percent comparisons are reported for each matched peak. These comparisons are checked against user-defined limits, and a color-coded report is created for easy identification of pass/fail peaks.

Reference setup screens in Agilent OpenLab MatchCompare allow you to name peaks and set relative or absolute tolerances for each individual peak.

Compatibility with OpenLab CDS

OpenLab CDS MatchCompare can be installed and used without OpenLab CDS. Data files that are converted to AIA format can be processed with this software. However, when OpenLab CDS MatchCompare is used within OpenLab CDS, no conversion is required, simplifying the comparison process even further.
Compatibility with Agilent Data Systems

OpenLab CDS MatchCompare provides both A.01.03.1 plus A.01.02 on the same disk, ensuring compatibility with the widest range of OpenLab CDS editions and versions.
