Why operate on borrowed time?

Agilent technology refresh program for food labs
Your Agilent 6890 GC and legacy GC/MSD systems continue to deliver the results that helped you succeed in the past. However, it is risky to rely on aging equipment to meet stringent regulations and production requirements.

Redefine what is possible in your laboratory

New Agilent GC systems build upon features developed for our trusted 6890 and legacy GC/MSD systems. They provide the sensitivity, reproducibility, and cost-efficient operation that were not possible 20 years ago.

– The 7820A GC delivers Agilent reliability for simple stand-alone applications
– The configurable 7890B GC produces reliable data today, and for decades to come
– The Intuvo 9000 GC is 25% more efficient and takes less than half the bench space required for traditional GCs
– Agilent chromatography data systems—OpenLAB CDS, ChemStation Edition, or EZChrom Edition—give you answers you can trust
– Improved sensitivity and ease-of-use make Agilent GC/MSD systems the perfect partner for the new GC systems

These new GC and GC/MSD systems will help you handle current and future challenges as you analyze organic contaminants in food, beverage, and agricultural samples.

New food application notes

Resolve your search for productivity

Continuing to use aging equipment significantly hinders your lab’s ability to meet current food analysis and reporting requirements.

For more than 50 years, Agilent has been committed to GC innovations, exceeding long-term performance expectations.

**Agilent 7820A GC**

The choice for routine analysis

Analyzing preservative additives, PAHs, and other compounds does not have to mean a large capital expense. The 7820A—with its simple valve configuration and range of detector options—delivers affordable, long-term innovation. And it’s backed by the Agilent 10-year value promise guarantee.

**Agilent 7890B GC**

High performance with low operational costs

When you need to perform low-level analyses of active compounds—and are faced with a shrinking operational budget—the 7890B GC delivers long-term performance. It features:

- An inert flowpath that minimizes the loss of low-level active compounds
- Retention time locking, split flow configurations, and backflush capabilities that eliminate the need to adjust retention times for triple quadrupole systems
- Helium Conservation Module with Sleep/Wake mode that decreases helium use and cost
- Auto calibrating hydrogen sensor for safer, less expensive use of hydrogen carrier gas

**Agilent Intuvo 9000 GC**

The business efficiency you’ve been dreaming of

Approach GC lab operations in a completely new way. Intuvo requires half as much bench space—and uses only half the power—of aging GC systems. Its groundbreaking features include:

- No nuts or ferrules, so anyone can change the column in less than a minute
- Guard Chip technology that protects the system from sample contamination
- No-clip columns that maintain their length, eliminating retention time update
- The perfect GC for use with 5977B, 7000D, and 7010B mass spectrometer systems
Agilent GC/MS systems

Meet demanding requirements with single quad, triple quad, or high resolution QTOF technology

These GC/MS systems are characterized by long term reliability, increased time between cleaning, low level sensitivity, and fast analysis

- The 5977B with high efficiency source (HES) provides a 10x decrease in detection limits or a 10x decrease in sample preparation for the same limits of detection
- The 7000D delivers low level precision with the use of dynamic multiple reaction monitoring (dMRM), while the 7010B combines HES and dMRM
- The 7250 GC/Q-TOF provides the flexibility for both unknown screening and ability to query historical data for previously non-targeted compounds with high resolution data

Move your lab ahead with Agilent GC innovations

An integrated approach to inertness

Flow path inertness is the cutting edge of GC, which is why Agilent has integrated inert flow path solutions into our next-generation GC systems. The Agilent Inert Flow Path ensures reliable, consistent inertness from injector to detector, decreasing analyte adsorption for lower LODs and better s/n response. That means you can achieve the parts-per-billion—or parts-per trillion—detection levels that today’s food analysis demands.

Increased sample throughput with the Agilent Intuvo GC System

The Intuvo system lets you get more done in less time at the lowest cost per sample—without having to change your existing methods. It features fast oven cool-down, new backflush capabilities, and advanced automation.

Integrated system intelligence

Early maintenance feedback allows you to eliminate unexpected downtime. This improved communication between the GC and the mass selective detector cuts venting time by up to 40%, and protects the system from damage by stopping the flow of carrier gas during shutdown events.

Improved dependability

The Agilent J&W Ultra Inert GC column family pushes industry standards for consistent column inertness and exceptionally low column bleed, resulting in lower detection limits and more accurate data for difficult analytes.

Expanded chromatographic capabilities

Backflush, flow splitters, GCxGC, Dean switches, and purged unions are all provided by Agilent capillary flow technology.

Take your data, and your data system, forward

Agilent has taken a step forward with state-of-the-art software. Our OpenLAB chromatography data systems are compatible with your existing methods and data, enabling you to take full advantage of the advanced features built into our chromatographs. What’s more, our reporting software is drag-and-drop simple and provides time-saving steps in your analysis, interpretation, and reporting workflows.

Agilent CrossLab Services: Maximize uptime with end-to-end support

You can trust Agilent CrossLab service experts to deliver valuable insights and keep your instruments running at top performance. Our industry-leading services—tailored to meet your needs—include technology refresh services, application consulting, repairs, preventive maintenance, compliance verification, and education. Ask us how we can support your laboratory today.
