Agilent Resolve Raman
Handheld Through-Barrier Identification
Agilent Resolve Raman – Handheld Through-Barrier Identification

Insight – Detect through opaque and colored barriers
Safe – No need to open or disturb containers
Fast – Accurate identification of chemicals and mixtures in about 1 minute, no sample preparation, or consumables
Rugged – Built to withstand tough environments
User-friendly – Large buttons, simple interface, designed for use in protective clothing

A new capability for hazardous materials, explosive ordnance disposal, and law enforcement

The Agilent Resolve Raman system is the world’s only handheld Raman system that enables true through-barrier identification of hazardous or contraband materials. Resolve rapidly detects and identifies materials from comprehensive libraries including explosives, precursors, toxic industrial chemicals, chemical warfare agents, and narcotics. Unique to Agilent, our proprietary handheld spatially offset Raman spectroscopy (SORS) technology enables positive identification through a wide range of sealed nonmetallic containers, barriers, and packaging.
A New Capability in Chemical, Narcotic and Explosive Detection

The Agilent Resolve Raman system differs from conventional handheld Raman identification systems, which typically only operate with line-of-sight to the sample under investigation. The system works in three modes:

**Through-Barrier mode**
Identifies through nonmetallic, sealed containers such as colored and opaque plastics, glass, paper, wrapping, sacks, and fabrics.

**Surface Scan mode**
Line-of-sight measurements, similar to conventional Raman identification systems.

**Vial Holder mode**
Quickly identifies materials contained within glass vials in a custom holder.

**Configure your own libraries**
- Explosives and precursors
- Narcotics and new psychoactive substances; including a wide range of Fentanyl derivatives
- Hazardous and toxic materials
- Household products and less common chemicals
- Chemical agents
- Create, manage, and deploy your own libraries

Identify through containers including:

- Colored plastic
- Colored glass
- Paper
- Sacks
- Packaging, cardboard, and fabric
True Through-Barrier Detection and Identification

Conventional handheld Raman systems are typically limited to operation through clear plastic bags or clear glass vials. If materials are concealed behind thicker, colored, or opaque barriers, it might be necessary to open and take a sample. In hazardous material response scenarios, opening or disturbing containers can increase risk to the operator and, sometimes, the public. Taking samples can also unnecessarily disturb crime scene evidence.

The Resolve system’s through-barrier capabilities enable response teams to identify container contents early in an operation, before escalation. This allows information about the situation to be gathered quickly and efficiently, enabling better critical decision making.

Identification through sealed containers

- **Safer operation** – Keep hazards contained
- **Efficient** – Removes the need to take samples, move objects, and waste valuable time in personal protective equipment (PPE)
- **Preserves evidence** – Crime scenes remain intact with containers undisturbed
- **Make decisions faster** – Get complete, accurate information earlier in the operation

Versatile measurement tools

The Resolve Raman system can do everything conventional handheld Raman systems do—point-and-shoot and vial holder measurements—but adds the capability to identify materials through barriers.

Increasing the power of handheld Raman identification

**Agilent Resolve Raman**

Resolve extends through-barrier capability to work with a wide range of non-metallic containers.

**Conventional Raman identification systems**

Conventional Raman systems require line-of-sight so work with clear plastic bags and vials, and some translucent packaging.

* Successful identification depends on container/contents combination.
Intuitive Interface – Clear Results

The Resolve system combines a tough handheld unit with a simple, user-friendly interface. Ruggedized and hardened, the system is built to withstand harsh environments. The software interface is simple to use—full system control requires only seven large, responsive buttons, which are ideal for gloved use, even in Level A PPE. Operational managers can fully customize workflows, laser-arming passwords, and the format of results and associated metadata.

Removable nose cone for contact and noncontact scan modes – in-field calibration and performance check is built into a protective nose cap

Large 12 cm (4.7 inch) display – clear, high contrast graphics for use in all light conditions

Large buttons with positive feedback – designed for gloved use

Li ion battery pack for up to 4 hours’ continuous use

Measurement

Conduct through-barrier, surface, or vial holder scans. Measurements typically take about 1 minute (or less in some modes of operation). Operators can reduce laser power and set a scan delay where necessary.

Results

Display results as BEST match only, ALL results or user-defined PRIORITIES only.

Analysis

Interrogate any result to see spectral views and simple, user-friendly chemical data. Overplot and compare library spectra. Search by chemical name or CAS number.

All accessories, cables and chargers are supplied within a hard transport case
Agilent Resolve Raman – Handheld Through-Barrier Identification of Hazardous Materials, Explosives, and Narcotics

Available soon: Agilent Resolve Command – centralized system management
- Manage passwords and default system settings
- Create, manage, and deploy libraries
- Centrally store and assess scan data
- Manage software updates

*Partial functionality available now. Please inquire for details.

<table>
<thead>
<tr>
<th>Specification</th>
<th>Description</th>
</tr>
</thead>
</table>
| Dimensions     | Width 155 mm (6.1 inches)  
Height 290 mm (11.4 inches)  
Depth 73 mm (2.9 inches) |
| Weight         | 2.2 kg (4.9 lb) including battery |
| Modes of operation | Through-barrier scan  
Surface scan (conventional point and shoot Raman)  
Vial Holder mode |
| Additional benefits | 830 nm laser – allows scanning of fluorescent materials  
Unique optics – safer operation with sensitive samples |
| Safety         | Scan delay  
Adjustable laser power (475 mW maximum) |
|Survivability   | Shock, drop, and vibration tested to international and military standards  
(further details available on request)  
IP67 – ingress protection against dust and water |
| Accessories    | Calibration piece, laser safety glasses, shoulder strap, and carry case  
Two Li ion battery packs and one single-bay charger  
Vial holder |
| Power requirements | Rechargeable Li ion battery  
Mains adaptor |
| Connectivity   | USB 2.0  
External power |
| Export data    | Data files for offline analysis  
Evidential reports and image files  
Reachback files for specialist support |
