Natural gas is widely used as an energy source for heating, cooking, generating electricity and clean-burning combustible engines. This naturally occurring mixture consists primarily of methane; however, it can also include other hydrocarbons (C1-C12 chain length), along with small amounts of oxygen, nitrogen, carbon dioxide, hydrogen, helium, and sulfur compounds.

Before it can be transported or sold, natural gas must meet specifications for calorific value and purity. Upstream and downstream activities — including exploration, extraction, production, transportation and distribution — all demand an array of analytical testing for relevant hydrocarbons, permanent gases, and impurities.

**Start monitoring natural gas collection and processing immediately after installation**

Based on Agilent 7890B GC and 490 Micro GC systems, Agilent Natural Gas Analyzers are factory-configured and chemically tested to help you evaluate the composition of natural gas, natural gas liquids, and processing by-products. They also let you measure permanent gases and hydrocarbon content (C1-C5 with C6+ as backflush), and perform extended analysis of hydrocarbons in natural gas to C12.

Agilent Natural Gas Analyzers include innovative technology and reflect our stringent quality control process. Systems include:

**Factory**
- Setup and leak testing
- Instrument checkout
- Installation of appropriate columns
- Factory-run checkout method using application checkout mix

**Delivery**
- Instrument manual for running the method
- CD-ROM with method parameters and checkout data files for easy out-of-the-box operation
- Application related consumables included — no separate ordering required
- Easy consumables re-ordering information

**Installation**
- Duplicate factory checkout with checkout sample — onsite by factory-trained support engineer
- Optional application startup assistance
Standard and Custom Natural Gas Analyzers
to monitor operations and finished products

7890B Extended Natural Gas Analyzer
Reliably quantify components and ascertain quality

The Agilent Extended Natural Gas Analyzer measures C1-C12 hydrocarbons — as well as permanent gases (oxygen, nitrogen, carbon dioxide, and carbon monoxide) — with features such as:
• Dual channel with TCD and FID detectors
• FID channel allows detection of C3-C12
• TCD channel with packed column for permanent gas analysis

Results are reported per GPA 2286.†

†Extended NGA analyzer does not calculate bridge components iC5 and nC5, although other analyzers with bridging calculations are available.

Micro GC Natural Gas Analyzer
Results you can count on when every second counts

In the lab or in the field, Agilent Micro GC Analyzers quickly deliver the data you need. Features include:
• Ready-to-go configuration with proven Micro GC hardware and software
• Iso-thermal technology that allows ultra-fast sequential operation
• Optional integrated micro-gasifier that allows you to analyze liquefied gases

What’s more, each channel is optimized for specific NGA analytes.

Micro GC NGA Chromatography
Note the excellent repeatability (RSD 0.5%)

*Requires argon carrier gas on MolSieve 5Å channel.

### Additional standard analyzers:
- Liquefied Natural Gas
- Conventional Natural Gas (large valve oven, with the flexibility to add another channel in the main GC oven)
- Sulfurs in Natural Gas

### Fully customized Analyzers for your unique requirements
Let Agilent help you meet your most challenging demands with specialized technologies that significantly reduce your time from system arrival to final validation. With pre-configured hardware and method-specific separation tools, your analysts can spend more time on calibration and validation per your laboratory’s SOPs.

Agilent has the technology and experience
to support your lab with fully customized solutions

Over the past four decades, Agilent has taken an active role in
developing methods and applications – many of which have evolved
into global standards for energy/fuels analysis.

Our 7890B GC, for example, is the world’s most widely used GC
system. It features accurate temperature controls and precise injection
systems — plus enhanced Electronic Pneumatic Control (EPC) for the
best retention times. Likewise, our 490 Micro GC is the industry leader
for mud logging applications. Its ability to provide results in as little as
30 seconds allows geophysicists and petroleum engineers to make fast,
accurate decisions about process optimization.

In addition, Agilent experts continue to be actively involved in ASTM
— the world’s most trusted source for standards development. We
have applied this deep regulatory understanding toward developing
methods for our Natural Gas Analyzers.

Beyond the box:
A full portfolio of customized products,
advice, and support

High-quality columns and supplies from the world
GC leader

Agilent-engineered GC columns and supplies deliver what your
natural gas applications demand — including:
• Long-term reliability and robustness
• Trouble-free instrument operation
• Faster analysis without loss of resolution

Local, on-site assistance

No matter where you are on the energy/fuels supply chain, Agilent
can help you increase production efficiency… reduce scrap and
rework… and enhance product quality.

Best-in-class service and support

Whether you need support for a single instrument or a large-scale,
multi-vendor operation, Agilent service professionals can help you
solve problems quickly and increase your uptime, so you can focus on
what you do best.

Custom GC and GC/MS configurations

Let Agilent customize a standard GC or GC/MS Analyzer with
specialized columns, valves, tubing inlets, and other add-ons —
including an extensive line of consumables and column modules.

Put your applications on the fast track.
