PROzyme
A part of Agilent

CERTIFICATE OF ANALYSIS

PRODUCT NAME:	GLYKO® ASIALO, MONOGALACTOSYLATED, BIANTENNARY COMPLEX N-GLYCAN (NA2G1 or G1)
PRODUCT CODE:	GKC-014300
LOT NUMBER:	DP19D1701a
PACK SIZE:	10 µg (qualitative standard for glycan identification)
PURITY:	≥90% of glycan by UPLC®
FORM:	Dry solid
STORAGE:	Store at -20°C in the dark before and after reconstitution
EXPIRATION:	May 2024, may be used for 1 year after reconstitution

STRUCTURE[1,2,3] :

Quality Control:

Sample Preparation: NA2G1 was labeled with 2-aminobenzamide (2-AB) by reductive amination[4] using the Signal™ 2-AB Labeling Kit (product code GKK-404).

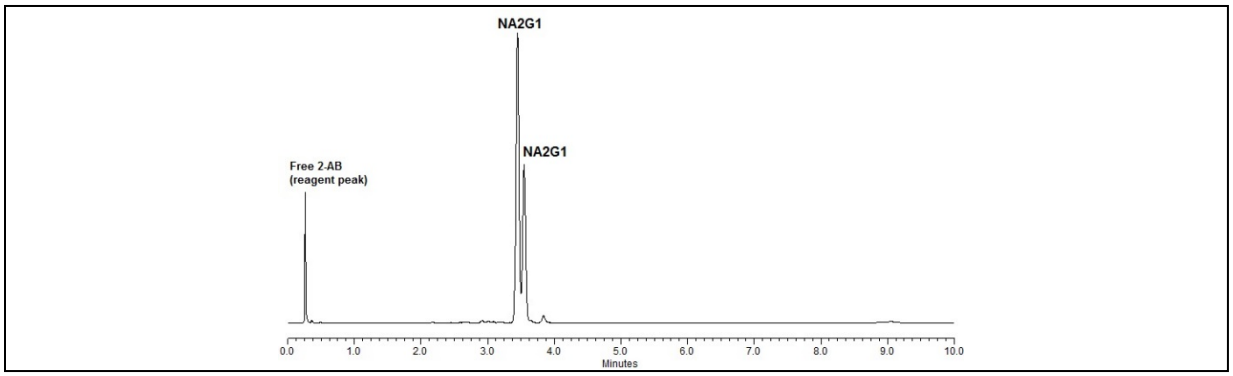

Figure 1 - **UPLC® Results**: 3 - 6 pmol (1 µl, aqueous) of the 2-AB-labeled[4] glycan was injected on a Waters ACQUITY UPLC® H Class System utilizing a 10-minute method under the conditions below:

Time (min)	Flow (ml/min)	%ACN	%Buffer
00.0	1.0	75.0	25.0
8.0	1.0	60.0	40.0
8.1	0.5	40.0	60.0
8.5	0.5	40.0	60.0
8.6	1.0	40.0	60.0
8.8	1.0	75.0	25.0
10.0	1.0	75.0	25.0

Column: Waters ACQUITY UPLC BEH Glycan Column (1.7 µm, 2.1 x 100 mm)
ACN: Acetonitrile
Buffer: 100 m*M* ammonium formate, pH 4.4
Flow rate: As stated in table, in ml/min
Temperature: 60° C
Max Pressure: 15,000 psi
Fluorescence Detection: λ_{ex} = 330 nm, λ_{em} = 420 nm

Average Mass[5]: 1479.4

Monoisotopic Mass[5]: 1478.5394

Structural Analysis: The purity and structural integrity of the glycan was assessed by UPLC[6] (as described above) and MALDI-TOF[7,8] or LC-MS. Agreement was found between the results from mass spectrometry and UPLC.

Application:

- Qualitative standard for various analytical procedures
- Fluorescent-labeling or formation of a variety of oligosaccharide derivatives
- Substrate for glycosidase and glycosyl transferase assays

Handling & Reconstitution:

The oligosaccharide library is shipped as a dried solid. Use ultra-pure water or an aqueous buffer to dissolve the materials.

Allow the unopened vial to reach ambient temperature and tap on a solid surface to ensure that most of the material is at the bottom of the vial. Gently remove the cap, add the desired volume of ultra-pure water or aqueous buffer, re-cap and mix thoroughly to redissolve all the material.

For maximal recovery, ensure that the cap lining is also rinsed. Centrifuge the reconstituted vial briefly before use.

Make sure that any glassware, plasticware, solvents or reagents used are free of glycosidases and carbohydrate contaminants.

Minimize exposure to elevated temperatures or extremes of pH. Store the reconstituted glycan library at -20° C. Allow the vial to equilibrate to ambient temperature before use.
