# SCREEN WITH CONFIDENCE

INCREASE YOUR FORENSICS TRACE-LEVEL ACCURACY AND REPRODUCIBILITY

Ensure lower limits of detection in challenging matrices – such as toxicology and forensics testing – with the industry's *only* GC flow path designed to be completely inert.

Agilent Inert Flow Path solutions provide reliable, consistent inertness for your GC flow path, allowing you to:

- Analyze compounds at trace levels in drugs of abuse, blood alcohol, explosives, and doping control applications
- Identify and quantify legal and illegal drugs in biological fluids and other challenging matrices
- Avoid false negatives by making sure your flow path does not adsorb analytes of interest

**The Results:** Compared to a standard flow path, an Agilent Inert Flow Path delivers increased S/N response, resulting in more accurate peak identification for greater precision analysis.
