- Confirming positive sensor alarms
- Establishing parameters for public safety
- Confirming effective remediation after an event
- Identifying complete unknowns with great reliability

When you must have a definitive answer, trust Agilent.

Agilent has been a leader for nearly four decades in the analysis of chemical and biological materials, with cutting-edge technologies and complete systems for both fixed and portable labs. We have proven technologies for routine and special analysis of chemical and biological agents, foods, environmental samples, industrial chemicals, and forensic samples—and a long history of supplying systems to the U.S. military's chemical demilitarization program and government agencies worldwide.

Our on-demand e-Seminars will show you the **latest tools—essential when your results must be right.**

Recorded seminars typically last 60 to 90 minutes.
