Agilent Customer Education

Get the Advantage of Agilent Customer Education

Whether you are buying new equipment or optimizing efficiency with current instrumentation, Agilent delivers education solutions that will improve your productivity and provide quality results. An initial investment in education will pay for itself and more.

The Value of Education

The goal of Agilent Education is to accelerate productivity and increase expertise in the laboratory. We offer several services tailored to your needs including:

- Formal classroom training at an Agilent site
- Customized training at your site
- Application consulting in your laboratory
- Convenient on-line eSeminars

Investing in a training program expedites the productive use of your new or existing instrument (figure 1). Your training investment will be rapidly returned in productivity gains.

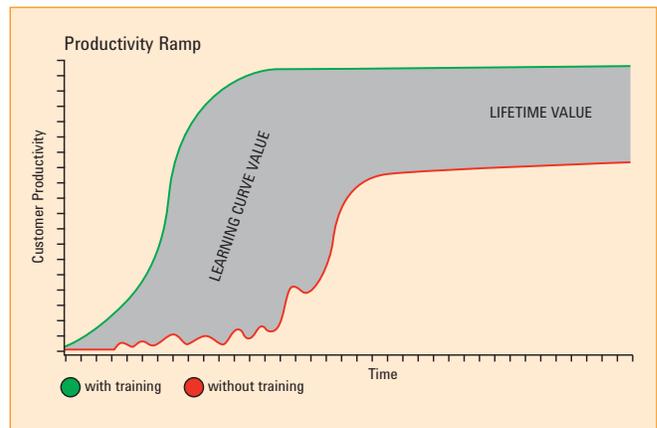

Figure 1. Proper training quickly leads to greater productivity and increases the value of your investment

Individualized Learning. Total Confidence.

It has never been easier to get the learning experience you and your associates require. Our training courses blend theory and hands-on practice, teaching you how to get the most from your laboratory instrumentation. Simply choose the mode of training that works best for you.

- **Classroom Training:** Agilent offers courses ranging from introductory levels to in-depth, hands-on training. The courses focus on instrument operation, troubleshooting and maintenance as well as advanced topics.
- **On-site Training:** Material from Agilent's standard courses may be combined with information unique to your needs to create a highly effective customized training course targeted to your team, delivered in your laboratory.
- **On-Site Consulting:** Agilent can provide assistance with more advanced topics such as method development and/or application optimization at your location, helping you to maximize your lab productivity and ensure quality data. Agilent consulting offers you the ultimate solution—our consultants have extensive knowledge of both Agilent and Industry Standards.
- **eSeminars:** Agilent eSeminars are a quick and convenient way to catch up on the latest technology right from your desk. Many of these courses are a great refresher or a high level introduction to our more in-depth training courses. Please visit our website www.agilent.com/chem/eseminars for the latest live and on-demand sessions.
