

AGILENT CROSSLAB SOLUTIONS APPLICATION DEPLOYMENT SERVICES

Agilent
CrossLab

From Insight to Outcome

Providing application insights to achieve economic and scientific outcomes

Bridging the gap between installation and application productivity

The Application Deployment service is one of a full range of Application Consulting services offered by Agilent. Delivered after installation and familiarization of a new Agilent instrument, this service is designed to help you deploy a specific application within your overall workflow.

Base features

- Optimization of installed system
- Setup of instrument method and analysis of a standard
- Setup of parameters for qualitative and quantitative data analysis
- Setup of calibration curve
- Setup of basic report
- Method troubleshooting overview

Optional features

- Determination of LOD and LOQ
- Custom calculations
- Compound database calculations
- Sample preparation

We provide:

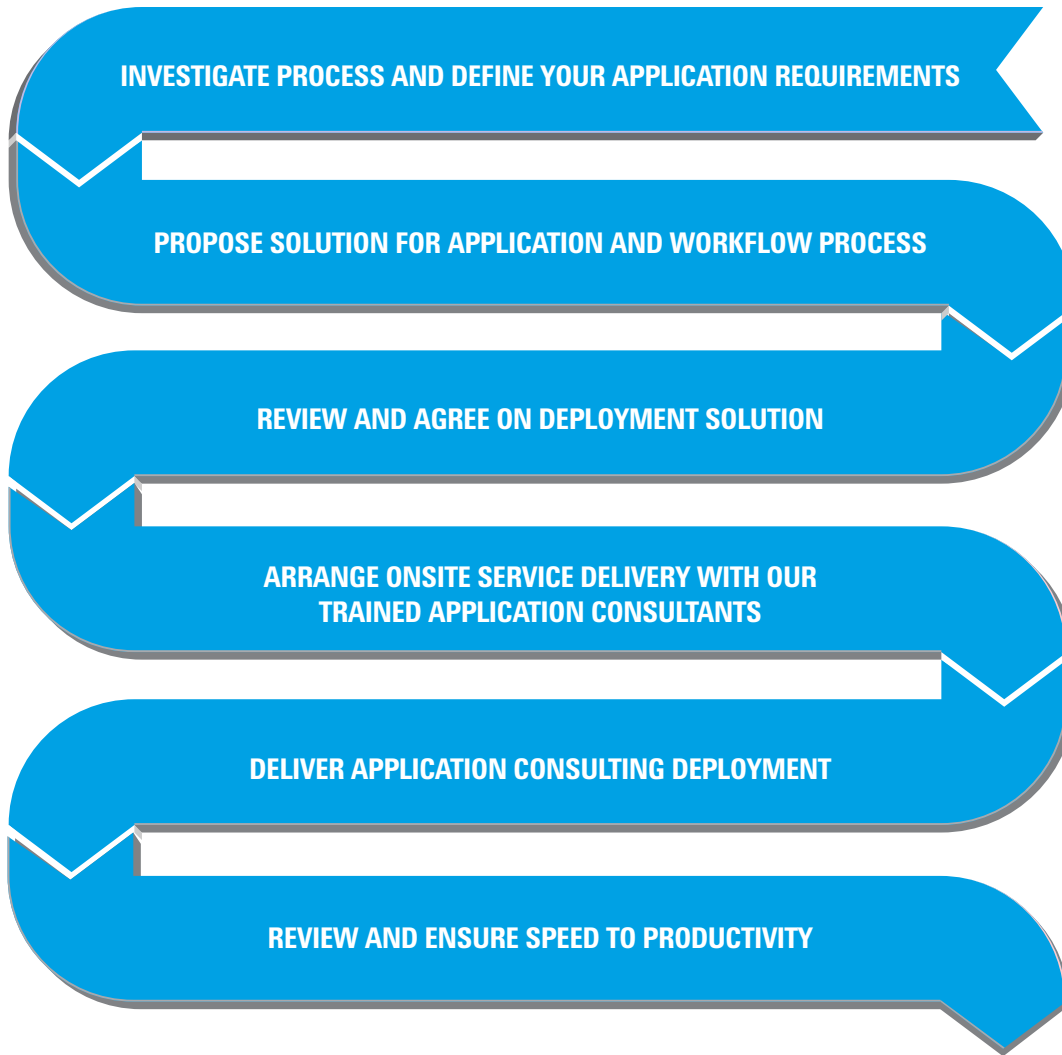

- Expert consulting on how to deploy the application
- Setup and creation of the workflow solution for your instrument
- Improved result quality and cost-efficiency for the solution
- Confidence in speed from installation to productivity

Agilent Technologies

Service delivery – a complete solution for your application needs

The Application Deployment service is more than just training. It is a complete process – delivering value at each stage – that helps you solve complex analytical challenges and speed your ramp to productivity.
