

Overcome the limitations of paper-based storage

NEW Agilent OpenLab ECM XT

A more efficient and reliable alternative to secure your reports

Whether you're a contract lab whose business depends on your reputation, or a production facility striving for the best product quality, your scientific data is your most important asset. Enjoy peace of mind knowing that your information is protected from unauthorized modifications and loss, and is easily accessible to facilitate inspections or investigations.

Ensure all important data is securely stored

Regulations often require you to store data files for a prescribed number of years. Content import tools make certain that all important instrument data is automatically secured at the appropriate time.

Prevent fraud and identify unauthorized changes or deletions

With OpenLab ECM XT, you can store data and files in a secure location with password-protected access. The software also tracks and saves every version of e-record and data from selected data systems. So you can recover previous versions and review the changes.

Reduce the time—and cost—of managing paper reports and records

Storing years of paper reports and records take up a lot of storage space (on-site or off-site) and is costly. OpenLab ECM XT simplifies filing, and organizing, with automated content import.

Take the headache out of retrieving your information

Global search functions make it easy to find items containing a particular term. You can also ask more complex questions, such as which tests were run by a particular technician during a given time-frame.

Implement quickly—with minimal qualification costs

OpenLab ECM XT is web-based and only requires installation on the server—unlike other scientific data management systems that require installation of software on every PC that is accessing the data. What's more, OpenLab ECM XT is easy to install for labs that currently run OpenLab CDS client/server.

Agilent
OpenLab

Centralizing data can enable your lab to:

- Reduce storage costs and paper usage
- Automatically secure data
- Find and retrieve information easily

OpenLab ECM XT can help meet your content management challenges

Problem

OpenLab ECM XT lets you:

"Our data files, e-records, and other documents are sometimes edited inappropriately."

- Restrict access to authorized individuals only
- Record and review the time, date and the person responsible for every file update
- Recover and review each and every version of a file, e-record or data from selected Agilent data systems

"We're wasting too much time, space, and money filing paper records."

- Store and organize e-versions of documents
- Ensure that every report is stored in the right place
- Turn paper storage area into productive space

"Adopting new technologies is time-consuming and costly. It also hurts productivity during the transition."

- Remove barriers to deployment:
 - No client deployment necessary
 - If you currently run OpenLab CDS client/server, installing OpenLab ECM XT is an "in-place" upgrade with no data migration
 - Flexibility to use your preferred database
- Minimize costs: OpenLab ECM XT has a smaller footprint than competitive software packages

"Finding and reviewing information is a hassle—especially when we have to travel to inconvenient locations."

- Easily search and review your data and files from any location—find raw data, methods, reports, through keyword search fields
- Review selected Agilent CDS data from any PC connected to your network

"How do we make sure files are stored permanently in their last used state?"

- Automatically store data and files at the appropriate time
- Lock data and files to prevent further modifications

"Managing data and files using nonlocal languages is error prone, and requires training."

- Navigate the interface—and manage files—in local languages, such as English, Chinese, Japanese, and Brazilian Portuguese
