Minimize sample cleanup steps, maximize analytical confidence

Choose the best kit for your sample

When you partner with Agilent, you get the industry's most comprehensive selection of QuEChERS kits for extraction and cleanup of any sample matrix. These include EN and AOAC method kits and EMR-Lipid for fatty matrices.

Improve extraction consistency

Pre-weighed kits provide excellent recoveries, reduce extraction time, and aid in analytical reproducibility.

Experience the convenience of pre-packaged extraction kits

Slim, easy-tear anhydrous salt packets ensure accurate transfer of exact salt amounts into tubes.

Keep contaminants from interfering with your sensitive analysis

Unknown peaks make your analytical work more complicated. That's why Agilent QuEChERS kits are QC tested to ensure exceptional cleanliness and accuracy.

Spend less time troubleshooting

You can count on Agilent to support your food testing needs with our comprehensive application library, selection tools, educational videos, and technical advice.

Extraction kits let you add salts to your sample after adding organic solvent—minimizing an exothermic reaction that can compromise analyte recovery. Dispersive kits accommodate both AOAC and EN methodologies.
