Warranty

The material contained in this document is provided “as is”, and is subject to being changed, without notice, in future editions. Further, to the maximum extent permitted by applicable law, Agilent disclaims all warranties, either express or implied, with regard to this manual and any information contained herein, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Agilent shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein. Should Agilent and the user have a separate written agreement with warranty terms covering the material in this document that conflict with these terms, the warranty terms in the separate agreement shall control.

Technology Licenses

The hardware and/or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

Restricted Rights Legend

If software is for use in the performance of a U.S. Government prime contract or subcontract, Software is delivered and licensed as “Commercial computer software” as defined in DFAR 252.227-7014 (June 1995), or as a “commercial item” as defined in FAR 2.101(a) or as “Restricted computer software” as defined in FAR 52.227-19 (June 1987) or any equivalent agency regulation or contract clause. Use, duplication or disclosure of Software is subject to Agilent Technologies’ standard commercial license terms, and non-DOD Departments and Agencies of the U.S. Government will receive no greater than Restricted Rights as defined in FAR 52.227-19(c)(1-2) (June 1987). U.S. Government users will receive no greater than Limited Rights as defined in FAR 52.227-14 (June 1987) or DFAR 252.227-7015 (b)(2) (November 1995), as applicable in any technical data.

Safety Notices

CAUTION

A CAUTION notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in damage to the product or loss of important data. Do not proceed beyond a CAUTION notice until the indicated conditions are fully understood and met.

WARNING

A WARNING notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in personal injury or death. Do not proceed beyond a WARNING notice until the indicated conditions are fully understood and met.

1. Introduction

Pre-installation checklist  6

The Agilent Cary 50 Series spectrophotometers are complete analysis systems that have been fully tested and proven to specification before dispatch from the manufacturing plant.

This manual contains general information about preparing the installation site and details of the facilities that must be provided for the installation.

The Cary 50 has been designed to be installed by the customer. You may be charged if installation is performed by Agilent service personnel.
Pre-installation checklist

Use the following checklist to make sure you have the work area ready to install the Cary 50.

<table>
<thead>
<tr>
<th>Preparation requirement</th>
<th>Complete</th>
</tr>
</thead>
<tbody>
<tr>
<td>The work area meets the environmental requirements (see Page 7).</td>
<td></td>
</tr>
<tr>
<td>A suitable workbench is available (see Page 8).</td>
<td></td>
</tr>
<tr>
<td>Suitable electrical power supplies are available (see Page 9).</td>
<td></td>
</tr>
<tr>
<td>A telephone line is available.*</td>
<td></td>
</tr>
<tr>
<td>All equipment is on site and has been checked for damage (see Page 11).</td>
<td></td>
</tr>
<tr>
<td>The Cary 50 has been unpacked (see Page 12).</td>
<td></td>
</tr>
<tr>
<td>A computer that meets requirements is available (see Page 15).</td>
<td></td>
</tr>
<tr>
<td>A working Microsoft® Windows® operating system is installed on the computer (see Page 19).</td>
<td></td>
</tr>
</tbody>
</table>

* A telephone outlet near the instrument is recommended. This will allow you to seek assistance when developing methods, or for use by Agilent authorized staff to remotely certify your instrument via modem using Telediagnostics.
2. Work Area

Suitability

Your Cary instrument is designed for indoor use. It is suitable for these categories:

- Installation category I
- Pollution degree 2
- Safety class 3 (EN 61010-1)

Environmental conditions

Sample preparation areas and materials storage facilities should be located in a separate room.

For optimum analytical performance it is recommended that the ambient temperature of the work area be between 20 and 25 °C and be held constant to within ±2 °C throughout the entire working day. Air conditioning is recommended. The room should be temperature-controlled if your analyses are particularly sensitive.

The work area should have a dust-free, low humidity atmosphere.
Work Area

Table 1 Suitable conditions during instrument transportation, non-operation and operation

<table>
<thead>
<tr>
<th>Condition</th>
<th>Altitude (m, ft)</th>
<th>Temperature (°C, °F)</th>
<th>Relative humidity, non-condensing (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-operating (transport)</td>
<td>0–2133, 0–7000</td>
<td>5–45, 41–113</td>
<td>20–80</td>
</tr>
<tr>
<td>Operating but not necessarily meeting</td>
<td>0–2000, 0–6562</td>
<td>5–31, 41–88</td>
<td>≤80</td>
</tr>
<tr>
<td>performance specifications</td>
<td></td>
<td>31–40, 88–104</td>
<td>≤[(80–3.33(t–31])]</td>
</tr>
<tr>
<td>Operating within performance specifications</td>
<td>0–853, 0–2800</td>
<td>10–35, 50–95</td>
<td>8–80</td>
</tr>
<tr>
<td></td>
<td>853–2133, 2800–7000</td>
<td>10–25, 50–77</td>
<td></td>
</tr>
</tbody>
</table>

**CAUTION** Operating specifications for the computer, monitor and printer/plotter may differ from those for the Cary spectrophotometer. You must check in the literature provided with these units and arrange the operating environment to suit the complete system.

Workbench

The workbench must be stable and strong enough to support the total weight of equipment to be used.

Table 2 Cary 50 weights and dimensions

<table>
<thead>
<tr>
<th>Weight (kg, lb)</th>
<th>Width (mm, in.)</th>
<th>Depth (mm, in.)</th>
<th>Height (mm, in.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>21, 46</td>
<td>590, 23</td>
<td>500, 20</td>
<td>200, 8</td>
</tr>
</tbody>
</table>

The bench tops should be large enough to permit a free circulation of air around each unit in the system. Remember to provide space for the computer, monitor and printer/plotter. The Cary 50 has been designed to withstand the weight of a standard 15 inch monitor.

The recommended workbench height is approximately 90 cm (36 in.).

To avoid damage from spillage of the samples being analyzed, the bench tops should be covered with a material that is corrosion-resistant and impervious to liquids.
Electrical specifications

The Cary 50 uses the power supply in the computer to derive the necessary voltages required to operate the instrument. It is therefore necessary to ensure that electrical power supplies for the computer comply with the rules and/or regulations imposed by local authorities responsible for the supply of electrical energy to the workplace.

**WARNING**

**Electrical Shock Hazard**

Good electrical grounding is essential to avoid potentially serious shock hazards. Ensure that power outlets are earth grounded at the grounding pin.

All power supplies must be single phase AC (alternating current) voltage, three wire system (active, neutral, earth) and should be terminated at an appropriate power outlet receptacle that is within reach of the computer power cord assembly.

For safety reasons, a separate power outlet receptacle should be provided for each unit in the system. Do not plan to use extension cords or outlet adapters.

Avoid using power supplies from a source that may be subject to electrical or RF (radio frequency) interference from other services; for example, large electric motors, elevators or welders.

**Table 3. Mains voltage requirements**

<table>
<thead>
<tr>
<th>System unit</th>

</tbody>
</table>
Work Area

NOTE  This table is indicative only. Refer to the literature provided with the computer and printer for details of individual power requirements.
3. Equipment On Site

Insurance

As the carrier’s liability ceases when the equipment is delivered, Agilent recommends that the instrument owner arranges separate insurance to cover transportation from the delivery point to the installation site. The delivery point will vary according to the carrier, the shipping method and in some cases the terms of sale. Some carriers will deliver only to their own distribution center while others may deliver to your off-loading bay. Very few carriers will deliver to the actual installation site.

In-house transit routes

In-house transit routes must be carefully considered. Vertical, horizontal and turning clearances should be calculated from the shipping carton dimensions of the spectrophotometer.

Table 4  Shipping weights and dimensions

<table>
<thead>
<tr>
<th>Weight (kg, lb)</th>
<th>Width (mm, in)</th>
<th>Depth (mm, in)</th>
<th>Height (mm, in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>23, 50.7</td>
<td>615, 24</td>
<td>710, 28</td>
<td>360, 14</td>
</tr>
</tbody>
</table>
Inspecting for transit damage

Transit damage can be obvious or concealed and in either case will be admitted by the carrier only if it is reported within the terms of the carrier’s agreement. For any claims against damage in transit, the following general rules apply:

- Before accepting delivery, you must inspect the packages for signs of obvious damage. The nature of any obvious damage must be noted on the carrier’s waybill, which then must be countersigned by a representative of the carrier.

- Within the time limit stated in the terms and conditions of carriage, a further inspection must be made for concealed damage. If any damage is found at this stage, the carrier must be notified in writing and all packaging material must be retained for subsequent inspection by a representative of the carrier.

- A copy of any damage report must be forwarded to the Agilent sales office dealing with the supply of your equipment.

---

**WARNING**

**Heavy Weight Hazard**

Many of the packages are large and heavy. To avoid the chance of injury to personnel or accidental damage to the equipment, always use two or more people when handling the packages or lifting equipment into position. NEVER attempt to lift the packages alone.
Unpacking

After accepting delivery, take the equipment to the installation site. Agilent instruments are inherently robust, and the packaging is designed to prevent internal damage. However, the contents form part of a precision measuring system and all packages should be handled with care. In transit, sharp jolts must be avoided and the packages should not be inverted or tilted unnecessarily. Markings on the shipping cartons generally indicate which side of the package should be kept on top.

Unpacking the equipment is your responsibility. As the packages are opened, ensure you received everything you ordered. If there are any discrepancies, notify the supplier. If any items are found to be damaged, immediately notify the carrier and supplier.

Check the contents against the enclosed packing lists. Any differences from the original order should be referred immediately to your Agilent sales office. All contents of the shipping packages should be assembled together when installation is to be carried out by Agilent service personnel. Do not discard any packaging components or filler materials.

To unpack the Cary 50 spectrophotometer:

1. Open the packing box.
2. Lift the Cary 50 from the packaging as depicted in Figure 1.
Figure 1. Lifting the Cary 50 from the packaging

WARNING

Heavy Weight Hazard
The instrument weighs about 21 kg. To avoid injury to personnel, damage to the instrument, or damage to other equipment, ALWAYS use at least two people to lift it into position.

Consult the manuals supplied with your computer, monitor and printer/plotter for their unpacking instructions.
4. Computer System Requirements

Minimum and recommended configurations 15
Setting up your computer 17
Instrument connection 18
Other connections 19

The computer must be certified to at least one of the following standards to ensure that the integrity of the electrical safety of the Cary 50 is not compromised:

- UL 1950
- CSA C22.2 No 950-95
- IEC 950 or IEC 60950
  EN 60950

WARNING

Electrical Shock Hazard

To ensure safe operation of the instrument, the switching power supply in the computer must comply with standard IEC 60950.

Minimum and recommended configurations

The minimum configuration (see Table 5) represents the absolute minimum on which you can run the software. This computer configuration may be out of manufacture, but you may want to use a computer you already have. The recommended configuration is that which you would buy new.

Agilent can supply a computer for the Cary 50 instrument in the recommended configuration (see Table 5) as part number 7910026300. The operating system will be pre-loaded. All software disks and manuals will be supplied.
Computer System Requirements

NOTE

Computers supplied with Letter of Credit orders will be an international brand and will be the recommended configuration or better.

Better computer components can be substituted for those listed. For example, processor type, amount of memory, screen size and resolution.

Setting up your computer

The Cary WinUV software requires Microsoft Windows 95, Windows 98 or Windows NT to be installed on your computer. For instructions on installing this, refer to the documentation supplied with the operating system.

**NOTE**
If Agilent is installing the Cary 50 for you, installation of a Windows operating system or Internet Explorer 4 is not included as part of the standard instrument installation.

Ensure that you have your display desktop area resolution set to 800 by 600 pixels and that the color palette is set to High Color (16 bit).

Check that your sound card and CD-ROM drive are working.

You also need to install Microsoft Internet Explorer 4 or later. This does NOT mean that you need to use Internet Explorer 4 as your Web browser — the Cary WinUV software uses some of the components that are supplied as part of Internet Explorer 4, but you can continue to use whichever browser you like.

You will probably need to purchase Internet Explorer 4 or download it for free from the Microsoft Web site (www.microsoft.com), as typically only earlier versions of Internet Explorer are shipped with Windows.
**Instrument connection**

The spectrophotometer is connected to the computer via a shielded interconnection cable provided with the instrument.

*Figure 2. Spectrophotometer to computer connections*

- Connection to the Cary 50
- Connection to the PC

*Figure 3. Cary 50 system interconnection*

The Cary 50 computer card requires reserved access to:

- Address space 210-21F
- Interrupt requests IRQ 3,5,7,10,11,12 (one off)

This computer card plugs into a computer I/O connector and it controls the instrument functions. It drives the two motors, lamp module and two detectors. Signals are converted into digital form to be processed by the computer.
Connection of the Cary 50 to the computer card is by a 37-way D-range connector. This connector carries motor drive supplies for the Cary 50 instrument and motor-driven accessories, detector analog signals and digital inputs and outputs.

The following supplies are used by the Cary 50. They are taken directly from the I/O bus connector:

- -12 V DC <0.25 A (maximum)
- +5 V DC <1 A (maximum)

The following power is supplied directly from the computer power supply (standard HDD connector +12 V DC only):

+12 V DC <1.5 A (maximum)

Typical power consumption (measured) is as follows:

- When idle (with motors powered) 400 mA
- Operating (motors and lamp module powered) 1.125 A
- Power dissipation (typical) instrument only 26 W

Operation of motor-driven accessories may increase the +12 volt current by a further 2 amperes (24 watts maximum). Note that these requirements are in addition to that required by the computer itself.

**Other connections**

The monitor, keyboard, mouse and printer/plotter are connected to the computer via cables that plug into the back of the computer. Consult your monitor and printer manuals for details of their individual cabling requirements.

The sample compartment contains these connections:

- 3.5 mm phono jack socket in the left wall for accessories.
- 8-pin DIN connector on the left side for the diode detector.
- 25-pin D-range connector on the right side for accessories (optional).
