Technical Overview

Introduction

PL aquagel-OH 30 8 µm high performance columns are extremely hydrophilic and so neutral polymers such as polyethylene oxide/glycol (PEO/PEG) can be run with water as eluent.

Such a separation is illustrated in Figure 1 with the analysis of a range of Agilent PEG standards.

PL aquagel-OH columns are ideal for relatively low molecular weight separations by size exclusion chromatography. They combine high pore volume and high column efficiency for maximum resolution.
Conditions
Columns: 2 x PL aquagel-OH 30 8 μm, 300 x 7.5 mm (p/n PL1120-6830)
Eluent: Water
Flow Rate: 1 mL/min
Detection: RI

Peak Identification
1. 12,600
2. 4,120
3. 1,470
4. 440
5. 106

Figure 1. Good separation of a mixture of PEG standards using PL aquagel-OH columns
