Step 1: Prepare for Installation

Step 1: Prepare for Installation

1 Install Microsoft Excel 2013 or 2016. See the manufacturer's documentation for help installing this application. For Qualitative Analysis, Excel is not required to generate reports.

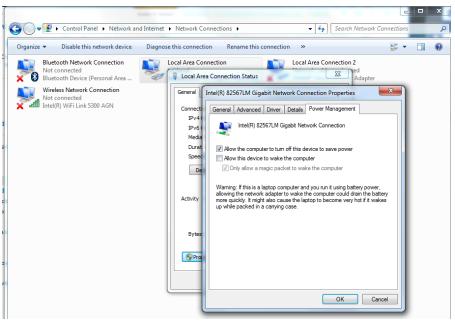

2 Run **Windows Update** to ensure you have the latest critical updates and security fixes. **Windows Update** must be complete before you continue.

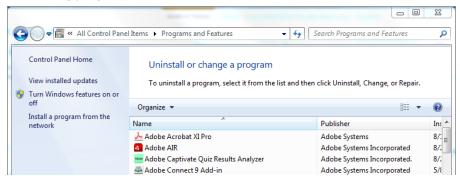

Step 1: Prepare for Installation

3 Confirm that the Windows LAN power management is disabled. See the Microsoft Windows help for more information.

4 If you are upgrading your MassHunter Workstation Qualitative Analysis or Quantitative Analysis B.05.00 or earlier, use the **Uninstall Programs** command in your **Windows Control Panel** to remove the programs that you will be upgrading. See the Microsoft Windows help for more information on uninstalling programs.

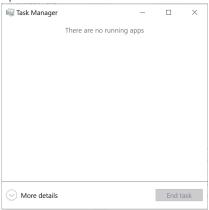

5 After you have removed the programs, reboot your computer.

If a batch contains multiple 'Blank' and/or 'DoubleBlank' samples, the average blank concentration is used.
- **Peak Annotations Add-in**: In the Quantitative Analysis program, this add-in allows you to add an abbreviation to the batch table that indicates the reason for manually integrating target or ISTD compounds.

- Quant-My-Way Flavors Setup Tool: This tool allows you to use the Quant-My-Way Flavors Setup program to create additional Quantitative Analysis flavors that display the tools and menu options you need for your laboratory or function. See the Agilent MassHunter Quantitative Analysis Quant-My-Way Flavors Setup Familiarization Guide.

The reporting templates are installed on the local hard drive with the program to MassHunter/Report Templates/Quant/. If you plan to use MassHunter Compliance Software, these templates must be uploaded to ECM before they can be accessed from the Quantitative Analysis program.

 - Standard Workflow: No compliance features are installed.

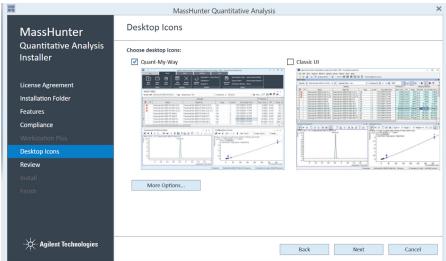

9 Click Next to continue.
