Agilent 490-Mobile Micro GC User Information

User Manual
Introduction

The 490-Mobile Micro GC extends the existing 490 Micro GC web portal access to mobile devices, allowing you to view instrument status or configure and control instruments through a clean, adaptive, and simplified interface.

To allow access a Micro GC, first follow the setup instructions in the 490-PRO Micro GC User Manual (G3581-90006). Enter the IP address of the GC into the browser of your mobile device to open the 490-Mobile UI.

Available features are determined by license type:

User Interface

The 490-Mobile Micro GC UI layout will automatically adjust according to the resolution of your device, adapting to both desktop and mobile use scenarios.

The UI is divided into the following regions:

- “Navigation Pane” on page 9
- “Heading” on page 10
- “Monitors” on page 11
- “Connection Status” on page 14
- “Control” on page 15
- “Workspace” on page 12
Navigation Pane

The navigation pane allows you to select a “Workspace”, “Change Language” settings, and “Quit”.

Tap or click  to view the navigation pane items names. Tap or click  again to hide item names.

Figure 2  Navigation panes
1 User Interface

Heading

The top of the UI is the heading. The heading displays the “Connection Status”, the “Control” box, as well as several “Monitors”.

Figure 3  Desktop view

Figure 4  Mobile view
Monitors

Monitors are shown at the top of the UI and include:

- “Solution Monitor” on page 24
- “Micro GC State” on page 25
- “Run Type” on page 26
- “Alarm” on page 27
- “Run No.” on page 29
- “Countdown Timer” on page 30

Figure 5  Monitor view
Workspace

The workspace is displayed in the main area of the UI. Each workspace is used for a unique interaction with the Micro GC. Select a workspace from the “Navigation Pane”. The following workspaces are available:

- “Status” on page 32
- “Data Workspace” on page 34
- “Solution” on page 42
- “Calibration” on page 47
- “Sequence” on page 49
Select a Workspace

From the “Navigation Pane”, tap or click a workspace to view it.

Workspace options are:

- “Status” on page 32
- “Data Workspace” on page 34
- “Solution” on page 42
- “Calibration” on page 47
- “Sequence” on page 49

The default workspace is **Status**.

![Navigation Pane Workspace Options](image-url)
Connection Status

The connection to a Micro GC is in one of three states:

- **Offline**: No connection to target Micro GC.
- **Online**: Connected to the target Micro GC, and is able to control.
- **Monitoring**: Connected to target Micro GC, but read only. This happens when the target Micro GC is in use by another PC Client software, such as PROstation for 490 Mobile. In this case, the Mobile UI cannot get the write privilege from the Micro GC.

You can tap (or hover when using desktop browser) the connection status indicator to reveal a tool tip.

When multiple mobile users are connected to the same Micro GC, they all can be online. Internally, the mobile UI does not maintain a connection to Micro GC, but establishes the connection once it needs to. Each mobile UI can control the same instrument separately, as long as it does not request the control privilege at the same time (Micro GC can support only one controller at a time). If multiple requests are made at the same time, only one of them will be accepted and the operations from other clients will be rejected by the instrument. The user will also get a notification that the request has been rejected.
Control

The control area contains buttons used to start and stop a run. See “Start a Run” on page 16 and “Stop a Run” on page 18 for more information.

![Control area](image-url)
Start a Run

1. Tap or click the run button.

![Run button](Figure 10)

2. Choose which type of run to start.

![Run options](Figure 11)
When **Single Run** or **Calibration Run** is chosen and a stream selector is configured in the Micro GC, you must input the Stream No.

A **Sequence Run** does not require Stream No.

![Image of the start run interface with options for Single Run, Calibration Run, and Sequence Run.

**Figure 12** Sequence run option

If a stream selector is not configured, the Stream No. field will not display.

![Image of the start run interface with options for Single Run, Calibration Run, and Sequence Run.

**Figure 13** Stream selector not configured option
Stop a Run

1. Tap or click the stop button.

![Stop button](image1)

Figure 14  Stop button

2. Select when to end the run. The run can be stopped immediately or after the completion of the current run or sequence.

![Stop run options](image2)

Figure 15  Stop run options
Change Language

1. Tap or click to display the language selection box for the UI.

![Language selection box](image)

2. Select your language and click Yes.
Figure 17  Language options
Quit

1 Tap or click Quit to quit the Mobile UI and return to the legacy main page.

2 Confirm your selection in the dialog box.
**Figure 19**  Quit confirmation dialog box
2 Monitors

Monitors are shown at the top of the UI and include:

- “Solution Monitor”
- “Micro GC State”
- “Run Type”
- “Alarm”
- “Run No.”
- “Countdown Timer”

Figure 20 Monitors
Solution Monitor

The current solution name is displayed in the Solution monitor.

![Solution Monitor](image)

**Figure 21**  Solution monitor

An asterisk indicates there are unsaved changes to a method or application.

![Unsaved Changes Asterisk](image)

**Figure 22**  Unsaved changes asterisk

Reloading the original, unedited solution, will remove the asterisk.
Micro GC State

The Micro GC **State** monitor indicates the current Micro GC state.

![State monitor](image)

**Figure 23**  State monitor

Micro GC states include the following:

![Micro GC states](image)

**Figure 24**  Micro GC states

When the state is **Error**, tap or click the label to display the corresponding error code and descriptions.

![Error state](image)

**Figure 25**  Error state
Run Type

The Run Type monitor displays the current run type. Run types include:

- Analysis
- Calibration
- Verification
- Blank

Figure 26  Run Type monitor
Alarm

An alarm notification displays once the alarm is triggered, if the alarm table is enabled. See the “Enable Alarm Table” on page 28 for more information.

1 Tap or click the alarm notification to view which alarms have been triggered.

2 To manually clear the alarms, tap or click Reset All.

The alarm status will clear after next run if the result has no alarm triggered.
Enable Alarm Table

The alarm table is configured from the PROstation for 490 Mobile. For information on setting alarms, see the PROstation for 490-Mobile manual.

To enable alarms in PROstation for 490-Mobile:

1. From the Application menu, select Alarms. The alarms table opens.

   ![Figure 29 Alarm table]

   **Figure 29** Alarm table

2. From the Alarm Settings tab, select Alarm table enabled.

   ![Figure 30 Alarm settings]

   **Figure 30** Alarm settings

Alarm notifications configured in the alarm table will now display in the Mobile UI when triggered.
Run No.

The Run No. monitor displays the sequence repeat, sequence Line #, and line repeat values.

![Run No. monitor](image1)

Figure 31  Run No. monitor

Tap or click the monitor to view tool tips.

![Run No. designations](image2)

Figure 32  Run No. designations

If the sequence is in Continuous mode, the Seq Repeat indicator displays an infinity symbol.

![Continuous mode](image3)

Figure 33  Continuous mode
Countdown Timer

When a run is in progress, the Countdown Timer monitor displays the seconds remaining in the run.

When the current run is completed, the monitor displays the total time in seconds of the next run.

Figure 34  Time Left monitor

Figure 37  Disabled channel (left)
Data Workspace

To view the last data and report:

Select **Data** from the navigation pane to display the chromatogram of the last data and report saved to the Micro GC from the Data workspace.

![Select Data from the navigation pane](image)

*Figure 38* Select Data from the navigation pane

![Data list](image)

*Figure 39* Data list
To view historical data

1. Plug a USB mass storage device into the Micro GC.
2. Configure the USB mass storage in PROstation. See “Configure USB Storage” on page 37.
3. From the Data workspace, select a chromatogram and application report to view from the “Data List” on page 36.
Data List

In the “Data Workspace” on page 34, the data list displays the available chromatogram and application report data.

For a Micro GC without a USB storage device attached, only the single Micro GC data is shown.

Figure 40  Data list

For a Micro GC with a USB storage device, after each run, data will also be saved the USB device and shown in the data list. You must have a correctly configured USB mass storage in PROstation for 490-Mobile. See “Configure USB Storage” on page 37.

Data can be sorted based on File Name or modified date. By default, the latest data is shown on top.

Figure 41  USB data files

You can select a chromatogram and application report to view from the data list, see “View Chromatogram and Report” on page 39.
Configure USB Storage

To use a USB mass storage device with the Micro GC, you must configure it in PROstation for 490-Mobile.

1. From the **Automation** menu in PROstation, select **USB Storage**.

![USB storage menu](image)

**Figure 42** USB storage

2. Enter parameters for the USB mass storage device.
After each run, the data will be saved to the USB device. You can access the list, see “Data List” on page 36, of the stored data from the Mobile UI.
View Chromatogram and Report

1 In the “Data Workspace” on page 34, tap or click in the Details column to display the details of the chromatogram and the application report for that row.

Chromatograms are displayed by channel.

2 Click a channel button to switch among channels.
3 Adjust the X-axis by sliding the bar handlers to zoom in and out. The Y-axis will adjust automatically based on the signal.

Figure 46: Zoom bar handlers

4 Tap or click **Zoom out** to view the entire chromatogram.
5  Scroll to see the remaining content of the report.

**Figure 47  Data report**

Tap or click Back to List or “Back to List” to view the “Data List” on page 36.
A solution is comprised of a method and its application. It contains both instrument control and data analysis information.

1. Select **Solution** to review or “Load a Solution” on page 45 from the solution workspace.

A solution is created and saved in the Micro GC by PROstation for 490-Mobile. A maximum of 9 solutions (from 1 to 9) can be stored on an instrument. (0 is reserved for the current active solution).

The example below shows there are 3 solutions downloaded into 1, 2, and 5 of this Micro GC.

2. Tap or click any solution item to review the details.
**NGA-0429**

*Figure 50  Solution details*
Set and Download Method Properties

Set method properties and download a method to the Micro GC.

1. From the **Method** menu in PROstation for 490-Mobile, select **Properties**.

![Figure 51 Method properties menu](image)

2. Select desired method properties.

![Figure 52 Select method properties](image)

3. Select **Method** to download the method settings.

![Figure 53 Download method settings](image)
Load a Solution

1. Select **Solution** from the “Navigation Pane”.

![Figure 54](image)

**Figure 54**  Select Solution from the navigation pane

2. Tap or click any solution item to review the details. The below image shows there are 3 solutions downloaded into 1, 2, and 5 of the Micro GC.

![Figure 55](image)

**Figure 55**  Solutions

The solutions you selected is displayed.

3. Tap or click **Load into GC** to make this the active solution.

![Figure 56](image)

**Figure 56**  Load into GC
3 Workspaces

4 When prompted, click **Yes** at the confirmation dialog.

![Confirmation dialog](image)

**Figure 57** Confirmation dialog

The solution is loaded into the Micro GC.

5 Once the solution is loaded by the instrument, you can verify the solution name in the “Solution Monitor” on page 24.

6 If the Micro GC configuration is changed after a solution is stored (by changing in carrier gas or replacing the channel with another PN), the configuration mismatch will produce an error. A solution cannot load when the system detects an error.

![Invalid solution error](image)

**Figure 58** Invalid solution error
Calibration

You can view and edit calibration info in the Calibration workspace.

1. Select Calibration from the navigation pane to display the calibration workspace.

2. Click Upload to refresh the table with latest data from the instrument.

3. With the Mobile UI, the only change you can make is the level 1 calibration amount.

4. Click Download to download the data to the instrument. If you have made changes to the calibration, a warning message will display:

![Confirmation dialog](image)

Figure 59  Select Calibration from navigation pane

Figure 60  Confirmation dialog
The Run button starts a calibration run.

### Change level 1 amount settings

You can change the level 1 amount settings before starting the calibration run. Change the level 1 amount by clicking each row to edit it.

**NOTE**

You cannot add or remove any component from this table.

<table>
