The part number (PN) can be taken from the product nameplate.

If not indicated otherwise in the legends, the illustrations in this document correspond to CDG-500 gauges with the DN 16 ISO-KF vacuum connection. They apply to the gauges with other vacuum connection by analogy.

We reserve the right to make technical changes without prior notice.

All dimensions in mm.
Intended Use

The Capacitance Diaphragm Gauge CDG-500 is intended for absolute pressure measurement of gases in its respective pressure range (\(\rightarrow 7\)). The gauge can be operated in connection with an Agilent AGC-100 Vacuum Gauge Controller, an Agilent Turbo AG Rack Controller, or with another appropriate measuring unit.

Function

The Capacitance Diaphragm Gauge consists of a capacitive sensor element made of aluminum oxide ceramics and electronics which convert the capacitance into a DC voltage output signal. The output signal is linear to the measured pressure and independent of the gas type.

Trademark

VCR® Swagelok Marketing Co.

Scope of Delivery

1× gauge
1× pin for adjusting settings via buttons
1× Calibration Test Report
1× Operating Manual
For cross-references within this document, the symbol (→ XY) is used, for cross-references to further documents, listed under "Further Information", the symbol (→ [Z]).
1 Safety

1.1 Symbols Used

**DANGER**
Information on preventing any kind of physical injury.

**WARNING**
Information on preventing extensive equipment and environmental damage.

**Caution**
Information on correct handling or use. Disregard can lead to malfunctions or minor equipment damage.

Notice

1.2 Personnel Qualifications

**Skilled personnel**
All work described in this document may only be carried out by persons who have suitable technical training and the necessary experience or who have been instructed by the end-user of the product.
1.3 General Safety Instructions

- Adhere to the applicable regulations and take the necessary precautions for the process media used. Consider possible reactions with the product materials.

- Adhere to the applicable regulations and take the necessary precautions for all work you are going to do and consider the safety instructions in this document.

- Before beginning to work, find out whether any vacuum components are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

Communicate the safety instructions to all other users.

1.4 Liability and Warranty

Agilent assumes no liability and the warranty becomes null and void if the end-user or third parties

- disregard the information in this document
- use the product in a non-conforming manner
- make any kind of interventions (modifications, alterations etc.) on the product
- use the product with accessories not listed in the product documentation.

The end-user assumes the responsibility in conjunction with the process media used.

Gauge failures due to contamination or wear and tear are not covered by the warranty.

<td>1013.25 / 760 = 1.3332...</td>
<td>101325 / 760 = 133.3224...</td>
</tr>
</tbody>
</table>

**Example:** Gauge with 10 Torr F.S.
Measuring signal \( U_{out} = 6 \text{ V} \)

\[ p = (6 \text{ V} / 10 \text{ V}) \times 10 \text{ Torr} \]
\[ = 0.6 \times 10 \text{ Torr} = 6 \text{ Torr} \]

\(^3\) Source: NPL (National Physical Laboratory)
Guide to the Measurement of Pressure and Vacuum,
3 Installation

WARNING

WARNING: fragile components
The ceramic sensor may be damaged by impacts.
Do not drop the product and prevent shocks and impacts.

3.1 Vacuum Connection

DANGER

DANGER: overpressure in the vacuum system
>1 bar
Injury caused by released parts and harm caused
by escaping process gases can result if clamps are
opened while the vacuum system is pressurized.
Do not open any clamps while the vacuum system
is pressurized. Use the type clamps which are
suited to overpressure.

DANGER

DANGER: overpressure in the vacuum system
>2.5 bar
KF flange connections with elastomer seals (e.g.
O-rings) cannot withstand such pressures. Process
media can thus leak and possibly damage your
health.
Use O-rings provided with an outer centering ring.
DANGER: protective ground
Products that are not correctly connected to ground can be extremely hazardous in the event of a fault. Electrically connect the gauge to the grounded vacuum chamber. This connection must conform to the requirements of a protective connection according to EN 61010:
- VCR flanges fulfill this requirement.
- For gauges with a KF flange, use a conductive metallic clamping ring.

Caution
Dirt and damages impair the function of the vacuum component.
When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.

Caution
Caution: dirt sensitive area
Touching the product or parts thereof with bare hands increases the desorption rate.
Always wear clean, lint-free gloves and use clean tools when working in this area.
Mount the gauge so that no vibrations occur. The gauge may be mounted in any orientation. To keep condensates and particles from getting into the measuring chamber preferably choose a horizontal to upright position and possibly use a seal with a centering ring and filter. If adjustment should be possible after the gauge has been installed, be sure to install it so that the buttons can be accessed with a pin (→ 24).

Remove the protective lid and connect the product to the vacuum system.

Keep the protective lid.
3.2 Power Connection

Make sure the vacuum connection is properly made (→ 18).

**DANGER**

The gauge may only be connected to power supplies, instruments or control devices that conform to the requirements of a grounded protective extra-low voltage (SELV) and limited power source (LPS), Class 2. The connection to the gauge has to be fused 4).

Ground loops, differences of potential, or EMC problems may affect the measurement signal. For optimum signal quality, please do observe the following notes:

- Connect the cable shield to ground on one side via the chassis ground. Do not connect the other side of the shield.
- Connect the supply common with protective ground directly at the power supply.
- Use differential measurement input (signal common and supply common conducted separately).
- Potential difference between supply common and housing ≤18 V (overvoltage protection).

4) VARIAN controllers fulfill this requirement.
If no sensor cable is available, make one according to the following diagram.

1. Connect the sensor cable to the gauge and secure it using the lock screws.

2. Connect the sensor cable to the controller.
4 Operation

Put the gauge into operation. If you are using an Agilent controller, define the measurement range (→ [1]).

A warm-up time of at least ¼ hour should be allowed; for exact pressure measurements a warm-up time of at least 2 hours is required.

4.1 Displays

<table>
<thead>

</tr>
<tr>
<td></td>
<td>flashing</td>
<td>Adjusting setpoint &lt;2&gt;</td>
</tr>
</tbody>
</table>

*) Gauges with switching functions only.
4.2 Zeroing the Gauge

The gauge is factory calibrated while "standing upright" (→ "Calibration Test Report").

We recommend performing a zero adjustment, when the gauge is operated for the first time. Due to long time operation or contamination, a zero drift could occur and zero adjustment may become necessary.

For adjusting the zero, operate the gauge under the same constant ambient conditions and in the same mounting orientation as normally.

The output signal (measuring signal) is depending on the mounting orientation. The signal difference between the vertical and horizontal mounting orientation is:

<table>
<thead>
<tr>
<th>F.S.</th>
<th>ΔU / 90°</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 Torr/mbar</td>
<td>≈2 mV</td>
</tr>
<tr>
<td>100 Torr/mbar</td>
<td>≈10 mV</td>
</tr>
<tr>
<td>10 Torr/mbar</td>
<td>≈50 mV</td>
</tr>
<tr>
<td>1 Torr/mbar</td>
<td>≈300 mV</td>
</tr>
</tbody>
</table>

If the gauge is operated via a controller, the zero of the whole measuring system has to be adjusted on the controller: first, adjust the zero of the gauge and then, the zero of the controller.
4.2.1 <ZERO> Adjustment

1. Evacuate the gauge to a pressure according to the table below:

<table>
<thead>
<tr>
<th>F.S.</th>
<th>Recommended final pressure for zero adjustment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 Torr/mbar</td>
<td>$&lt;5 \times 10^{-2} \text{Torr}$</td>
</tr>
<tr>
<td>100 Torr/mbar</td>
<td>$&lt;5 \times 10^{-3} \text{Torr}$</td>
</tr>
<tr>
<td>10 Torr/mbar</td>
<td>$&lt;5 \times 10^{-4} \text{Torr}$</td>
</tr>
<tr>
<td>1 Torr/mbar</td>
<td>$&lt;5 \times 10^{-5} \text{Torr}$</td>
</tr>
</tbody>
</table>

If the final pressure in the gauge is too high for zero adjustment (>25% of the F.S.), the zero cannot be reached and the <RUN> LED flashes. If this is the case, activate the factory setting and adjust the zero again (→ 31).

2. Operate the gauge for at least ¼ hour (until the signal is stable).

3. Briefly press the <ZERO> button with a pin (max. ø1.1 mm). The zero adjustment runs automatically. The <RUN> LED flashes until the adjustment (duration ≤8 s) is completed.

After zero adjustment the gauge automatically returns to measurement mode. The <RUN> LED lights.
The zero can also be adjusted via the RS232C interface (→ [2]).

The <RUN> LED flashes if
- the signal output is negative (< -20 mV) when the final pressure has been attained
- the zero adjustment has failed.

4.2.2 <ZERO> Adjustment with Ramp Function

The ramp function allows to adjust the zero at a known reference pressure within the measurement range of the gauge.

It also permits to adjust an offset of the characteristic curve in order to
- compensate for the offset of the measuring system or
- obtain a slightly positive zero for a 0 … 10 V AD converter.

The offset should not exceed 2% of the F.S. (+200 mV). At a higher positive offset, the upper limit of the measurement range is exceeded.

Recommended procedure for adjusting the offset of a measuring system: → Notice 24.

1. Operate the gauge for at least ¼ hour (until the signal is stable).
2. Push the <ZERO> button with a pin (max. ø1.1 mm) and keep it depressed. The <RUN> LED starts flashing. After 5 s, the zero adjustment value, starting at the current output value, keeps continually changing (ramp) until the button is released or until the setting limit (max. 25% F.S.) is reached. The corresponding output signal is delayed by about 1 s.
Push the <ZERO> button again:

<table>
<thead>
<tr>
<th>Fine adjustment within 0...3 s:</th>
<th>the zero adjustment value changes by one unit (push &lt;ZERO&gt; button in intervals of 1 s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change of direction within 3...5 s:</td>
<td>the zero adjustment changes its direction (the flashing frequency of the &lt;RUN&gt; LED changes briefly)</td>
</tr>
</tbody>
</table>

If the <ZERO> button is released for more than 5 s, the gauge returns to the measurement mode.

The zero with Base-Pressure-Offset can also be adjusted via the RS232C interface (→ [2]).

The <RUN> LED flashes if the signal output is negative.
4.3 Switching Functions

The two switching functions can be adjusted to any pressure within the whole measurement range (→ 17).

The current setpoint setting

- is output at the D-Sub connector instead of the measurement signal (→ 22) and can be measured with a voltmeter after the <SP> button is pressed, or
- can be read/written via the RS232C interface.

If the pressure is lower than the setpoint, the corresponding LED is lit (<1> or <2>) and the corresponding relay (→ 22) is energized.

Measurement signal (Pressure $p$)
4.3.1 Adjusting the Setpoints

The setpoints can be adjusted via

- the buttons on the gauge,
- the RS232C interface (→ [2]).

DANGER

DANGER: malfunction

If processes are controlled via the signal output, keep in mind that by pushing the <SP> button the measurement signal is suppressed and the corresponding threshold value is output instead. This can cause malfunctions.

Push the <SP> button only if you are sure that no damages can arise from a malfunction.
Adjusting Setpoint <1>

1. Push the <SP> button with a pin (max. ø1.1 mm). The gauge changes to the switching function mode and outputs the current lower threshold value at the measurement value output for about 10 s (LED <1> flashes).

2. For changing the threshold value, push the <ZERO> button and keep it depressed. The threshold keeps changing from the current value (ramp) until the button is released or until the limit of the setting range is reached.
Capacitance Diaphragm Gauge CDG-500

3 Push the <ZERO> button again:

<table>
<thead>
<tr>
<th>Fine adjustment within 0...3 s:</th>
<th>the zero adjustment value changes by one unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change of direction within 3...5 s:</td>
<td>the zero adjustment changes its direction (the flashing frequency of the &lt;RUN&gt; LED changes briefly)</td>
</tr>
</tbody>
</table>

⚠️ If the <ZERO> button is released for more than 5 s, the gauge returns the measurement mode.

🛠️ The upper threshold is automatically set 1% F.S. above the lower one (hysteresis).

Adjusting Setpoint <2>
Push the <SP> button twice (LED <2> flashes). The adjustment procedure is the same as for setpoint <1>.

4.4 Activating the Factory Setting (Factory Reset)
All user defined parameters (e.g. zero, filter) are restored to their default values.

⚠️ Loading of the default parameters is irreversible.

Loading the default parameters:

1. Put the gauge out of operation.

2. Keep the <ZERO> button depressed for at least 5 s while the gauge is being put into operation (Power ON).
5 Deinstallation

**WARNING**
WARNING: fragile components
The ceramic sensor may be damaged by impacts. Do not drop the product and prevent shocks and impacts.

**DANGER**
DANGER: contaminated parts
Contaminated parts can be detrimental to health and environment.
Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

**Caution**
Caution: vacuum component
Dirt and damages impair the function of the vacuum component.
When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.
Capacitance Diaphragm Gauge CDG-500

Caution

Caution: dirt sensitive area
Touching the product or parts thereof with bare hands increases the desorption rate.
Always wear clean, lint-free gloves and use clean tools when working in this area.

1. Vent the vacuum system.
2. Put the gauge out of operation.
3. Unfasten the lock screws and disconnect the sensor cable.
4. Remove the gauge from the vacuum system and install the protective lid.
6 Maintenance, Repair

Under clean operating conditions, the product requires no maintenance.

Gauge failures due to contamination or wear and tear are not covered by the warranty. We recommend checking the zero at regular intervals (→ 25).

Agilent assumes no liability and the warranty becomes null and void if any repair work is carried out by the end-user or third parties.

7 Returning the Product

WARNING

WARNING: forwarding contaminated products
Contaminated products (e.g. radioactive, toxic, caustic or microbiological hazard) can be detrimental to health and environment.

Products returned to Agilent should preferably be free of harmful substances. Adhere to the forwarding regulations of all involved countries and forwarding companies and enclose a duly completed declaration of contamination.

Products that are not clearly declared as "free of harmful substances" are decontaminated at the expense of the customer. Products not accompanied by a duly completed declaration of contamination are returned to the sender at his own expense.
8 Disposal

DANGER: contaminated parts

Contaminated parts can be detrimental to health and environment.

Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

WARNING: substances detrimental to the environment

Products or parts thereof (mechanical and electric components, operating fluids etc.) can be detrimental to the environment.

Dispose of such substances in accordance with the relevant local regulations.

Separating the components

After disassembling the product, separate its components according to the following criteria:

- Contaminated components
  
  Contaminated components (radioactive, toxic, caustic or biological hazard etc.) must be decontaminated in accordance with the relevant national regulations, separated according to their materials, and disposed of.

- Other components
  
  Such components must be separated according to their materials and recycled.

Notes
Dear Customer:

Please follow these instructions whenever one of our products needs to be returned.

1) Complete the attached Request for Return form and send it to Agilent Technologies (see below), taking particular care to identify all products that have pumped or been exposed to any toxic or hazardous materials.

2) After evaluating the information, Agilent Technologies will provide you with a Return Authorization (RA) number via email or fax, as requested.
   Note: Depending on the type of return, a Purchase Order may be required at the time the Request for Return is submitted. We will quote any necessary services (evaluation, repair, special cleaning, etc).

3) Important steps for the shipment of returning product:
   - Remove all accessories from the core product (e.g., inlet screens, vent valves).
   - Prior to shipment, drain any oils or other liquids, purge or flush all gasses, and wipe off any excess residue.
   - If ordering an Advance Exchange product, please use the packaging from the Advance Exchange to return the defective product.
   - Seal the product in a plastic bag, and package product carefully to avoid damage in transit. You are responsible for loss or damage in transit.
   - Agilent Technologies is not responsible for returning customer provided packaging or containers.
   - Clearly label package with RA number. Using the shipping label provided will ensure the proper address and RA number are on the package. Packages shipped to Agilent without a RA clearly written on the outside cannot be accepted and will be returned.

4) Return only products for which the RA was issued.

5) Product being returned under a RA must be received within 15 business days.

6) Ship to the location specified on the printable label, which will be sent, along with the RA number, as soon as we have received all of the required information. Customer is responsible for freight charges on returning product.

7) Return shipments must comply with all applicable Shipping Regulations (IATA, DOT, etc.) and carrier requirements.

RETURN THE COMPLETED REQUEST FOR RETURN FORM TO YOUR NEAREST LOCATION:

</table>

| Tel: | Fax: |

| Customer Ship To: | Customer Bill To: |

| Europe only: VAT reg. Number: | USA/Canada only: Taxable Non-taxable |

2) PRODUCT IDENTIFICATION

| Product Description | Agilent P/N | Agilent S/N | Original Purchasing Reference |

3) TYPE OF RETURN (Choose one from each row and supply Purchase Order if requesting a billable service)

| 3A. | Non-Billable | Billable | New PO # (hard copy must be submitted with this form): |

| 3B. | Exchange | Repair | Upgrade | Consignment/Demo | Calibration | Evaluation | Return for Credit |

4) HEALTH and SAFETY CERTIFICATION

AGILENT TECHNOLOGIES CANNOT ACCEPT ANY PRODUCTS CONTAMINATED WITH BIOLOGICAL OR EXPLOSIVE HAZARDS, RADIOACTIVE MATERIAL, OR MERCURY AT ITS FACILITY.

Call Agilent Technologies to discuss alternatives if this requirement presents a problem.

The equipment listed above (check one):

- [ ] HAS NOT pumped or been exposed to any toxic or hazardous materials. OR
- [ ] HAS pumped or been exposed to the following toxic or hazardous materials. If this box is checked, the following information must also be filled out. Check boxes for all materials to which product(s) pumped or was exposed:

  - Toxic
  - Corrosive
  - Reactive
  - Flammable
  - Explosive
  - Biological
  - Radioactive

List all toxic/hazardous materials. Include product name, chemical name, and chemical symbol or formula:

NOTE: If a product is received at Agilent which is contaminated with a toxic or hazardous material that was not disclosed, the customer will be held responsible for all costs incurred to ensure the safe handling of the product, and is liable for any harm or injury to Agilent employees as well as to any third party occurring as a result of exposure to toxic or hazardous materials present in the product.

### SCROLL AND ROTARY VAPE PUMPS

| • Pump doesn’t start |
| • Doesn’t reach vacuum |
| • Pump seized |

### DIFFUSION PUMPS

| • Hoser failure |
| • Doesn’t reach vacuum |
| • Vacuum leak |

### ADDITIONAL TERMS

Please read the terms and conditions below as they apply to all returns and are in addition to the Agilent Technologies Vacuum Product Division – Products and Services Terms of Sale.

- **Customer is responsible for the freight charges for the returning product.** Return shipments must comply with all applicable Shipping Regulations (IATA, DOT, etc.) and carrier requirements.
- **Customers receiving an Advance Exchange product agree to return the defective, rebuildable part to Agilent Technologies within 15 business days.** Failure to do so, or returning a non-rebuildable part (crashed), will result in an invoice for the non-returned/non-rebuildable part.
- **Returns for credit toward the purchase of new or refurbished Products are subject to prior Agilent approval and may incur a restocking fee.** Please reference the original purchase order number.
- **Units returned for evaluation will be evaluated, and a quote for repair will be issued.** If you choose to have the unit repaired, the cost of the evaluation will be deducted from the final repair pricing. **A Purchase Order for the final repair price should be issued within 3 weeks of quotation date.** Units without a Purchase Order for repair will be returned to the customer, and the evaluation fee will be invoiced.
- **A Special Cleaning fee will apply to all exposed products per Section 4 of this document.**
- **If requesting a calibration service, units must be functionally capable of being calibrated.**
