Preface

This manual provides the information you need to successfully perform tip seal replacement on your Agilent TriScroll™ Dry Vacuum Pump. Tip seal replacement is generally recommended when the pump base pressure has risen to an unacceptably high level for your application. If you have questions that are not addressed in this manual, please contact the nearest Agilent service facility listed on the rear cover of this manual.

Safety Considerations

READ THE FOLLOWING INSTRUCTIONS. TAKE ALL NECESSARY PRECAUTIONS.
The following format is used in this manual to call attention to hazards:

**WARNING** The warning messages are for attracting the attention of the operator to a particular procedure or practice which, if not followed correctly, could lead to serious injury.

**CAUTION** The caution messages are displayed before procedures, which if not followed, could cause damage to the equipment.

**NOTE** The notes contain important information taken from the text.

Maintenance personnel must be aware of all hazards associated with this equipment. They must know how to recognize hazardous and potentially hazardous conditions, and know how to avoid them. The consequences of work performed by unskilled or improperly trained maintenance personnel, or careless operation of the equipment employed in the specified maintenance procedures can be serious. Every maintenance person must read and thoroughly understand the materials discussed and the instructions provided in this manual, as well as any additional information provided by Agilent.
All warnings and cautions must be read carefully, fully understood, and strictly observed. Consult local, state/province, and national agencies regarding specific requirements and regulations. Address any safety, operation, and/or maintenance questions to the nearest Agilent location.

**WARNING** Disconnect power from the TriScroll 300 before performing any maintenance procedure.

Allow the pump to cool before performing any maintenance procedure. Approximate cool-down time is one to two hours.

**CAUTION** Wipe all O-rings clean with a lint-free cloth before installation to ensure that no foreign matter is present to impair the seal.

Do not use alcohol, methanol or other solvents on O-rings. To do so causes deterioration and reduces their ability to hold a vacuum.

If applicable, apply a small amount of Krytox® GPL 224 grease and wipe the O-rings “shiny” dry.

**NOTE** Agilent recommends replacing all O-rings during routine maintenance or during any maintenance procedure requiring that O-rings be removed.

**WARNING** The TriScroll 300 weighs 26.4 kg (58 lbs). To avoid injury, use proper lifting techniques when moving the pump.
## Related TriScroll Manuals

Manuals related to the installation and operation, pump module replacement, and major maintenance for the TriScroll 300 series pumps are listed in the following table:

TriScroll 300 Dry Scroll Vacuum Pump

Tip Seal Replacement

General Information
Agilent TriScroll 300 series pumps will provide years of trouble-free service if maintenance procedures and intervals are observed. Bearing grease replenishment and tip seal replacement is recommended when the pump base pressure rises to an unacceptably high level for your application. Replace bearings, rotary seals and O-rings if the pump bearings exhibit humming or grinding noises. Main bearing life may be shortened if your application requires the pumping of high quantities of water vapor. Use bearing purge to keep this water from impacting bearing life.

Required Equipment
- **Tip Seal Replacement Kit**: PTSS0300TS (“Tip Seal Replacement Kit” on page 2)
- **Tip Seal Tool Kit**: PTSS0300TS (“Tip Seal Tool Kit” on page 3; customer can supply metric Allen wrench set and chisel)
- **Vacuum Measuring Gauge**: Capable of measuring pressures of 5 to 20 mTorr with an accuracy of ± 1 mTorr. A capacitance manometer or Pirani gauge is recommended.

Chisel

Metric Hex Key Set
TriScroll 300 Disassembly

Remove the Outboard Housing
1. Remove the three M5x16 screws that attach the cowling to the module.
2. Remove the cowling.
3. Remove the six M6x45 screws that attach the outboard housing to inboard housing.
4. Remove the outboard housing.
TriScroll 300 Disassembly (continued)

5. Remove and discard the O-ring.

6. Remove and discard the tip seals from the outboard housing.
Remove the Inboard Housing and the Orbiting Plate Assembly

1. Remove the four M5x15 screws that attach the inboard housing to the frame.

2. Remove the inboard housing from the frame.

   Use care to locate the rubber spider that mounts between the motor shaft coupling and the inboard housing assembly.

   **CAUTION**  
   The inboard housing assembly weighs 15.5 lbs.
Disassemble the Inboard Housing and the Orbiting Plate Assembly

1. Remove the M8x12 screw and washer that attaches the counterweight to the inboard housing.

2. Lift the counterweight off of the inboard housing.

   The counterweight is keyed to the crankshaft. Locate the key after removal of the counterweight from the inboard housing.
3. Remove the inboard housing from the crankshaft and orbiting plate.

4. Remove and discard the tip seals from the inboard housing.
5. Remove and discard the tip seals from both sides of the orbiting plate.
TriScroll 300 Disassembly (continued)

Scroll Cleaning

1. Carefully scrape with a chisel to loosen the tip seal dust from the:
   - Orbiting plate
   - Inboard housing
   - Outboard housing

   **CAUTION** *Do not scratch or gouge any surface.*

   If seal debris is attached to the sides of the scroll walls, use a razor blade or Exacto knife to scrape this debris off.

2. Use dry compressed air to remove the tip seal debris from the scroll parts.

   **CAUTION** *Do not blow compressed air or debris into exposed bearings.*

3. Wipe the scroll parts with isopropyl alcohol and a clean lint free cloth to remove any remaining tip seal debris.
TriScroll 300 Reassembly

1. Insert the new tip seal into the scroll tip grooves on the inboard housing side of the orbiting plate.

2. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/4" (6 mm) from the outer end to allow for thermal growth.

3. Insert the new tip seal into the scroll tip grooves on the inboard housing.

4. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/4" (6 mm) from the outer end to allow for thermal growth.
5. Place the scroll in the vertical position and reinstall the inboard housing onto the crankshaft.
   Placing the scroll in the vertical position keeps the tip seals from falling out of the grooves during reassembly.
6. Ensure that the scroll walls are properly aligned to allow full engagement of the two parts.

7. Reinstall the counterweight onto the crankshaft.
8. Align the keyways in the counterweight and crankshaft and install the key.
9. Secure the counterweight to the crankshaft using the M8x12 screw and washer.
10. Install the rubber spider into the motor shaft coupling.

11. Align the motor coupling to properly mate with the fan hub coupling.

12. Install the inboard housing onto the frame.
13. Secure the inboard housing assembly to the frame using the four M5x15 screws.

14. Insert the tip seal in the scroll tip grooves on the orbiting plate.
15. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/8" (3mm) from the outer end to allow for thermal growth.

16. Squeeze a dot of Krytox GPL 224 grease into each of the three needle bearings.
17. Smear grease over the needles.
18. Coat the lips of all three seals with grease.
19. Lightly grease the new 2-269 O-ring and install it around the lip on the inboard housing.

20. Insert the tip seals into the grooves on the outboard housing.

21. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/8" (3mm) from the outer end to allow for thermal growth.
22. Install the outboard housing over the orbiting plate and against the inboard housing, engaging the dowel pins.

**NOTE**
Align the three sync cranks and the orbiting plate in the downward position before installing outboard housing.

23. Secure the outboard housing to the inboard housing with the six M6x45 screws.
24. Install the cowling over the pump module.
25. Secure with the three M5x16 screws.

This figure illustrates a fully reassembled TriScroll 300 Series Pump.
Putting the Pump Back into Service

The TriScroll 300 pump can be placed into service immediately after maintenance is complete. However, 24 hours of run time is required before a base pressure of 10 mTorr can be achieved.

**NOTE**

The 24 hour run time does not have to be continuous. If your application requires a low base pressure, it is wise to run the pump for the 24-hour period for optimum performance.
Vacuum Products Division
Instructions for returning products

Dear Customer:

Please follow these instructions whenever one of our products needs to be returned.

1) Complete the attached Request for Return form and send it to Agilent Technologies (see below), taking particular care to identify all products that have pumped or been exposed to any toxic or hazardous materials.

2) After evaluating the information, Agilent Technologies will provide you with a Return Authorization (RA) number via email or fax, as requested.
   Note: Depending on the type of return, a Purchase Order may be required at the time the Request for Return is submitted. We will quote any necessary services (evaluation, repair, special cleaning, eg).

3) Important steps for the shipment of returning product:
   - Remove all accessories from the core product (e.g. inlet screens, vent valves).
   - Prior to shipment, drain any oils or other liquids, purge or flush all gasses, and wipe off any excess residue.
   - If ordering an Advance Exchange product, please use the packaging from the Advance Exchange to return the defective product.
   - Seal the product in a plastic bag, and package product carefully to avoid damage in transit. You are responsible for loss or damage in transit.
   - Agilent Technologies is not responsible for returning customer provided packaging or containers.
   - Clearly label package with RA number. Using the shipping label provided will ensure the proper address and RA number are on the package. Packages shipped to Agilent without a RA clearly written on the outside cannot be accepted and will be returned.

4) Return only products for which the RA was issued.

5) Product being returned under a RA must be received within 15 business days.

6) Ship to the location specified on the printable label, which will be sent, along with the RA number, as soon as we have received all of the required information. Customer is responsible for freight charges on returning product.

7) Return shipments must comply with all applicable Shipping Regulations (IATA, DOT, etc.) and carrier requirements.

RETURN THE COMPLETED REQUEST FOR RETURN FORM TO YOUR NEAREST LOCATION:

## 4) HEALTH and SAFETY CERTIFICATION

Agilent Technologies cannot accept any products contaminated with biological or explosive hazards, radioactive material, or mercury at its facility.
Call Agilent Technologies to discuss alternatives if this requirement presents a problem.

The equipment listed above (check one):

[ ] HAS NOT pumped or been exposed to any toxic or hazardous materials.  OR

[ ] HAS pumped or been exposed to the following toxic or hazardous materials. If this box is checked, the following information must also be filled out. Check boxes for all materials to which product(s) pumped or was exposed:

- Toxic
- Corrosive
- Reactive
- Flammable
- Explosive
- Biological
- Radioactive

List all toxic/hazardous materials. Include product name, chemical name, and chemical symbol or formula:

________________________________________________________________________________________________________

NOTE: If a product is received at Agilent which is contaminated with a toxic or hazardous material that was not disclosed, the customer will be held responsible for all costs incurred to ensure the safe handling of the product, and is liable for any harm or injury to Agilent employees as well as to any third party occurring as a result of exposure to toxic or hazardous materials present in the product.

**Section 6) ADDITIONAL TERMS**

**Please read the terms and conditions below as they apply to all returns and are in addition to the Agilent Technologies Vacuum Product Division – Products and Services Terms of Sale.**

- Customer is responsible for the freight charges for the returning product. Return shipments must comply with all applicable Shipping Regulations (IATA, DOT, etc.) and carrier requirements.
- Customers receiving an Advance Exchange product agree to return the defective, rebuildable part to Agilent Technologies within 15 business days. Failure to do so, or returning a non-rebuildable part (crashed), will result in an invoice for the non-returned/non-rebuildable part.
- Returns for credit toward the purchase of new or refurbished Products are subject to prior Agilent approval and may incur a restocking fee. Please reference the original purchase order number.
- Units returned for evaluation will be evaluated, and a quote for repair will be issued. If you choose to have the unit repaired, the cost of the evaluation will be deducted from the final repair pricing. A Purchase Order for the final repair price should be issued within 3 weeks of quotation date. Units without a Purchase Order for repair will be returned to the customer, and the evaluation fee will be invoiced.
- A Special Cleaning fee will apply to all exposed products per Section 4 of this document.
- If requesting a calibration service, units must be functionally capable of being calibrated.
