

## Agilent Technologies Deutschland GmbH Energy Policy

Agilent Technologies is committed to implement, operate, and improve an energy management system according to ISO 50001 to improve its energy performance. To make sure that the energy management system meets its intended outcome the top management ensures that:

- Energy Objectives and targets are set and followed up using appropriate energy performance indicators.
- Information and Resources to meet these objectives are provided.
- A suitable and competent energy team is formed.
- Legal and other requirements are identified and satisfied.
- The procurement of energy efficient products and services is promoted.
- Support design activities that consider energy performance improvements

The top management ensures that within the scope and boundaries of the management system this policy as well as energy objectives and targets is compatible with the strategic direction of the organization and that the energy management requirements are included into the respective business processes. This includes also that processes are established to identify and control changes with a potential effect on the organizations energy management system.

To that end top management commits to support any person to contribute to the effectiveness of the management system including other management roles to fulfill their leadership function

Furthermore, it ensures that resources are provided, action plans are approved and implemented to achieve continuous improvement of the energy performance.

The importance of the efficiency of energy management system as well the necessity to follow its requirements is clearly communicated by the top management throughout the hole organization.
