Test Conditions
Each module included in the kit is tested in a SureVector assembly reaction as described in the published SureVector Cloning Protocol. The SureVector LacZ module is used as the gene insert. Modules from other SureVector kits are used in the assemblies in order to complete the vectors (e.g., the SureVector KanR Selectable Marker and the SureVector p15A Origin). Transformations are performed and the resulting blue and white colonies are counted to ensure that the numbers meet quality specifications.
