Supplier Managed Inventory Program

Supplier Training
Nocturne Tool Version 2002

Supplier Managed Inventory Program

Training Agenda

- Agilent Vision, Mission, Objectives

- Agilent SMI Overview

- Nocturne Process Map

- Benefits to Supplier/Agilent

- Key responsibilities

- Training, cost, and technical support

- Nocturne Demo

Supplier Managed Inventory Program

Mission

- Provide uniform, global SMI capabilities for Agilent and our suppliers

- Satisfy cost and ease of use requirements for Agilent and our suppliers

- Leverage the span and cost effectiveness of the internet on behalf of Agilent and our suppliers

- Support effective and broad adoption of the SMI tool and related processes by providing our suppliers the appropriate training and implementation support

Supplier Managed Inventory Program

Vision

The Agilent SMI Program will deploy tools and processes to :

- Establish SMI as a fundamental business practice between Agilent and our key suppliers including Contract manufacturers and 3rd Party Logistics Providers (CMs and 3PLs)

- Enable the implementation of a common SMI tool and process between Agilent and our key suppliers including CMs and 3PLs

- Empower our key suppliers and CMs and 3PLs to effectively manage inventories on behalf of Agilent at the lowest possible cost

Note: Key suppliers in the rest of this document include Contract Manufacturers and 3rd Party Logistics Providers (CMs and 3PLs)

Supplier Managed Inventory Program

Objectives

- Provide relevant, accurate, "real time" information to our suppliers to "tighten" supply chain links

- Leverage Internet to allow for efficient data exchange with minimal effort

- Improve Buyer/Supplier collaboration through Supplier involvement with the use of a common tool.

Supplier Managed Inventory Program

SMI Overview

- Agilent inventory monitored by Supplier

  - Two hour updates of consumption, receipts, on-hand balance

  - Weekly forecast updates--ability to smooth production

- Supplier replenishes based on consumption

  - Upper and lower control limits and replenishment triggers enable Supplier to keep Agilent inventory "right sized"

  - Begin with high volume/dollar parts

- Win-Win approach

  - Information sharing between Agilent & Supplier allow for appropriate inventory investment for both

Supplier Managed Inventory Program

Nocturne Overview

- An internet based application, designed and supported by Healex Corporation, that is the Agilent worldwide solution for SMI

- A global supply chain management process that:
  - ⇨ communicates inventory and replenishment information between buyers and suppliers
  - ⇨ enables inventory and administrative efficiencies through collaborative information sharing

- A Statistical Material Flow Process to manage inventory service levels and trigger supplier replenishment

- A proactive information flow of inventory data that is "pushed" to the suppliers to enable "real time" maintenance of the contractually agreed upon service level

- A continuous learning mechanism that drives buyer/supplier collaboration and mutual understanding and management of the replenishment process

Supplier Managed Inventory Program

Key Features

- A web-based system, viewable 24 x 7, that updates data between Agilent, suppliers and CMs every two hours and includes the following:

  ⇨ Min/Max levels

  ⇨ consumption and transaction data

  ⇨ on hand balances

- Provides the supplier the ability to:

  ⇨ search and view, and aggregate consumption/ on hand balances of a single part number at an Agilent site or at a CM or 3PL

- Provides Agilent buyer the ability to:

  ⇨ search and view supplier inventory at stocking location or 3P

  ⇨ manage Min/Max and replenishment triggers

  ⇨ analyze real time supplier performance measures

Agilent Technologies

Supplier Managed Inventory Program

Buyer Benefits

- Proactive supplier replenishment based on current data and managed through buyer determined Min/Max limits and replenishment triggers

- Opportunity for enhanced collaboration based on real time performance measurement

- Offer a "win-win" approach to supply base

- 24x7 availability of part data updated every two hours provides the opportunity to:

  - ➪ enhance assurance of supply

  - ➪ reduce inventory liability and accelerate inventory turns

 - ➪ focus on "problem" parts and supplier

Supplier Managed Inventory Program

Supplier Benefits

- Opportunity to leverage a global Agilent program for all supplier locations

- Capability to view Agilent, 3PL and CM part data in a user friendly, web based format

  ➪ 24 x7 view of part data updated every two hours

- Opportunity to "smooth" production, improve capacity management and enhance flexibility

- Ability to proactively replenish Agilent inventory

- Ability to reduce lead times and improve performance measurements

- Provides the basis for a strengthened world- wide partnership with Agilent

Agilent Technologies

Supplier Managed Inventory Program

SMF Process

Statistical Material Flow Process

- Nocturne is a statistical tool for monitoring material flow and it is based on statistical process control methodology that allows buyers to set upper and lower inventory limits

- Supplier responds to the data made visible by Nocturne and replenishes the inventory based on Agilent's service level requirements

Supplier Managed Inventory Program

Nocturne Basics

The following are the most common terminology used by the Nocturne tool:

- USL - upper specification limit = Max - this is the highest level of inventory the buyer wants on site

- LSL - lower specification limit = Min - this is the lowest amount of inventory the buyer wants on site

- Trigger - A formula used to set off "alarms" if inventory levels are not staying with limits set by the buyer, based on mean usage or largest historical pull

- Net usage - The number of parts "moved" the previous day, typically this is a negative number

Supplier Managed Inventory Program
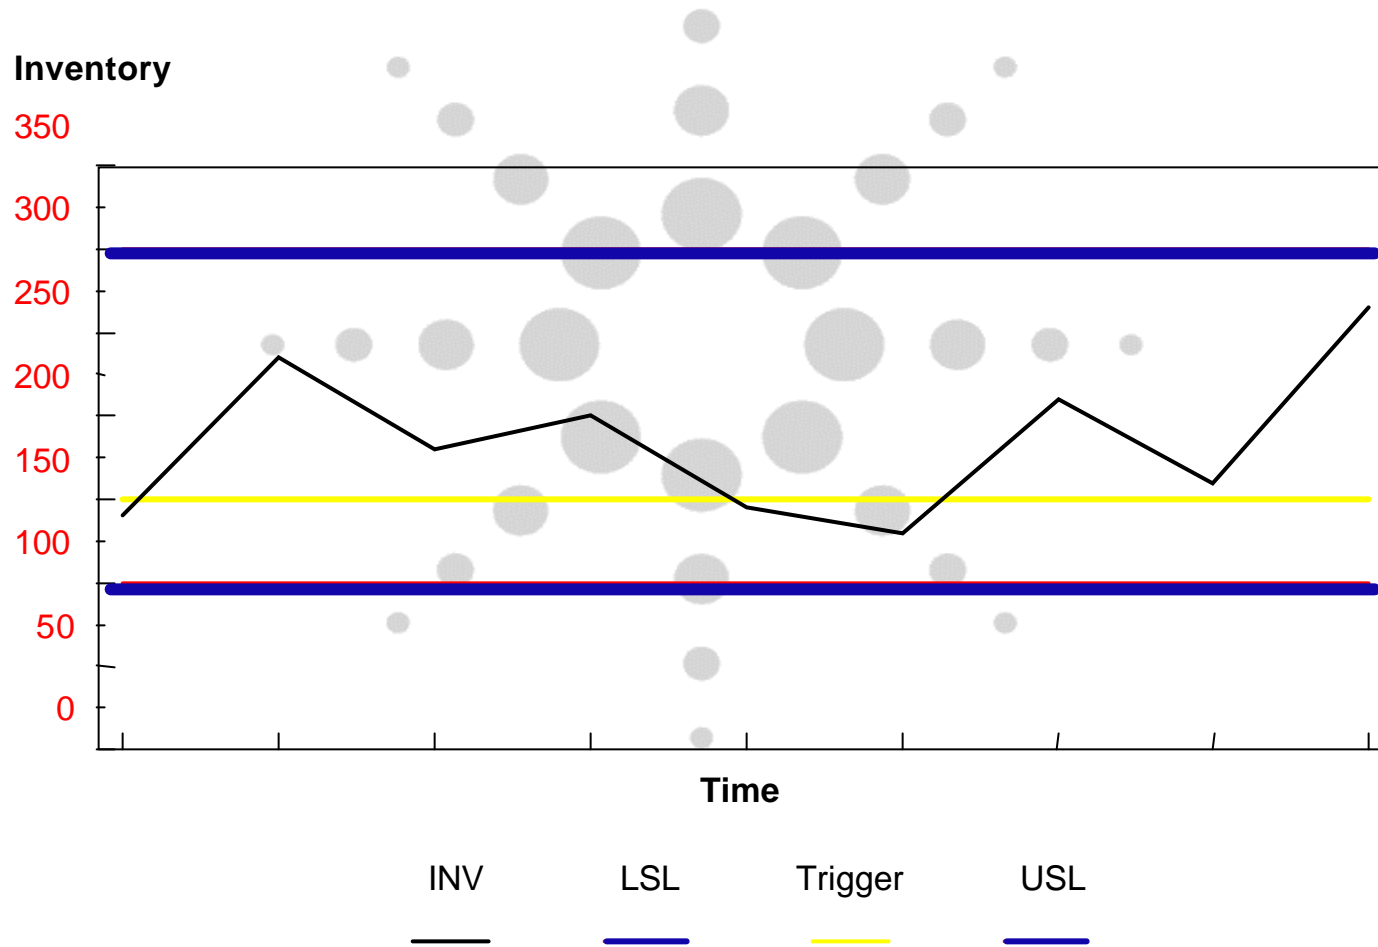

Part Status Definitions

Status		Color	Definition	Example
Overage	 	Green	Ending Balance > USL	$110 > 100$
Green	 	Green	Trigger < Ending Balance < USL	$13 < 80 < 100$
Yellow	 	Yellow	LSL < Ending Balance < LSL + Trigger	$50 < 55 < 63$
White	 	White	LSL = Ending Balance	$50 = 50$
Red	 	Red	Ending Balance < LSL	$40 < 50$
Out of Control (OOC)		N/A	Net Usage > 0	$20 > 13$

Data for Example above: USL = 100   LSL = 50   Trigger = 13 Net Usage = -20

Time

Agilent Technologies

Supplier Managed Inventory Program

Buyer Typical Day

New Day → Review Nocturne parts on web → Problems with SMI parts?

Problems with SMI parts? — Yes → Resolve with Supplier

Problems with SMI parts? — No → End

Resolve with Supplier → Need to modify Min/Max or do analysis?

Need to modify Min/Max or do analysis? — Yes → Make changes on part numbers or suppliers as required → End

Need to modify Min/Max or do analysis? — No → End

Supplier Managed Inventory Program

Supplier Typical Day

New Day → Review Nocturne parts on web → Shipments needed?

Shipments needed? — No → End

Shipments needed? — Yes → Ship as required

Ship as required → Parts need critical action?

Parts need critical action? — Yes → Communicate Issue/resolution with Agilent Buyer

Parts need critical action? — No → End

Communicate Issue/resolution with Agilent Buyer → End
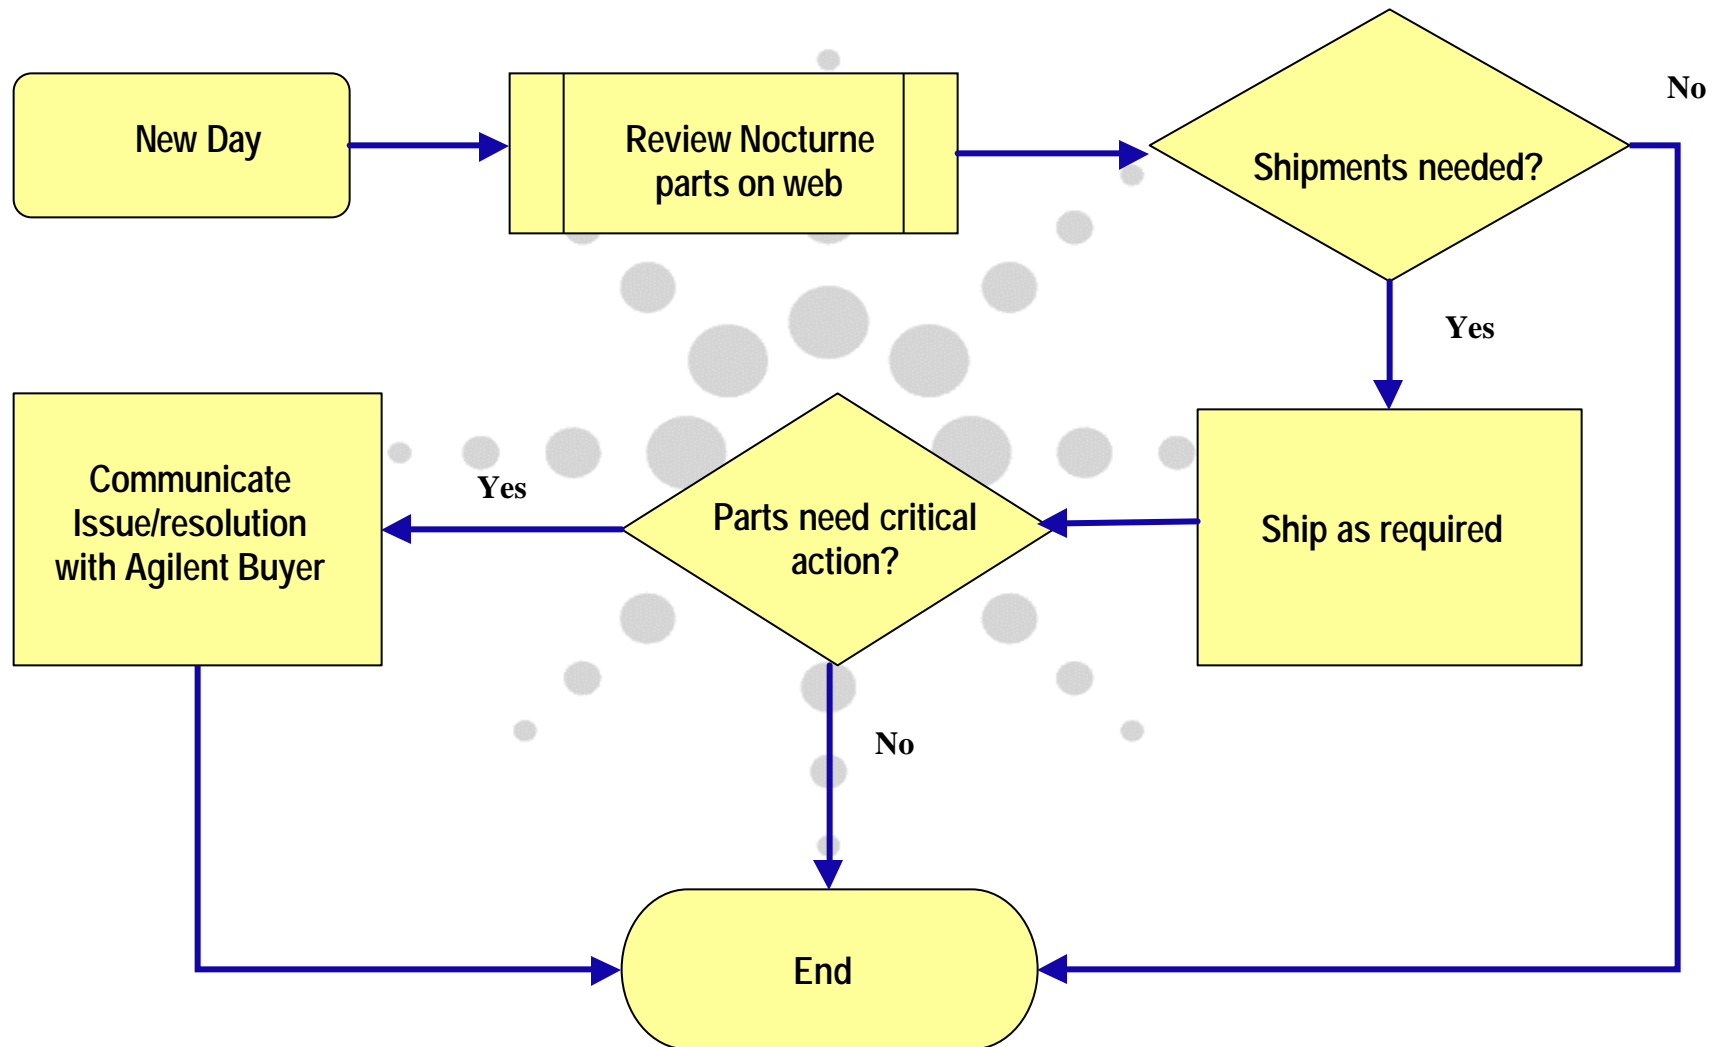

Supplier Managed Inventory Program

Performance Metrics

Daily Support Performance

- Percentage of parts/supplier within LSL (Min) and USL (Max) range

Last 90 Days Support Performance

- Percentage of parts/supplier within LSL (Min) and USL (Max) range during the last 90 working days

Average Stock Level

- The percent of average inventory level of parts/supplier within LSL (Min) and USL (Max) range

Note: All measurements are for parts/suppliers on SMI greater than 60 days

Supplier Managed Inventory Program

Performance Metrics

Average Duration of Reds (days)

- Average time (days) that a parts/supplier is in red status before required service level is reached

Inventory Value ($000.)

- Daily ending inventory value by parts/supplier

Inventory Turns Per Year

- Agilent methodology for determining inventory turns for parts/supplier

Note: All measurements are for parts/suppliers on SMI greater than 60 days

Supplier Managed Inventory Program

Training Cost and Tech Support

- Agilent or Healex Systems (providers of Nocturne application) will provide training and support for the web-based application

- Agilent or Healex Systems will provide web based training for all supplier individuals who will use the program

- Agilent will pay for these services from Healex; there is no charge to Supplier

- If the Supplier has specific questions regarding the data provided contact the Agilent buyer; if there are functionality/application problems, contact your Site Lead

Supplier Managed Inventory Program

Nocturne System Requirements

- Nocturne 2002 version 2.02A will be designed for Internet Explorer version 5.0 or higher, or Netscape Communicator version 5.0 or higher. Earlier versions or other browsers will not be supported. Nocturne 2002 version 2.02A will require JAVA Virtual Machine (JVM), which complies with Java 1.1.4 or above specifications. This is the version that will be enabled with the Oracle go live and all sites and suppliers will migrate to this version as Agilent converts their systems.

Supplier Managed Inventory Program

Processes after Go Live-FAQ's

When we go to Oracle, how does a buyer add a supplier?

➢ When Oracle will include the supplier information in the supplier detail file and it will happen automatically.

How does Healex know we have added a supplier?

➢ Nocturne will detect it in the supplier detail file and automatically post

it. Healex admin support staff will take appropriate follow-up action.

How does the supplier get notified?

➢ Healex admin support staff will send an email to the supplier.

Supplier Managed Inventory Program

Processes after Go Live-FAQ's

What is the timing to get passwords?

➢ Healex will notify new users of their password within 48 hours of being added, and usually much less. As a rule,new users are now being emailed their passwords within a couple of hours of being added.

How does a buyer know if a supplier has been added to Nocturne or not?

➢ They will get an email from Nocturne admin support.

What other email notifications are sent to buyers and suppliers?

➢ Notification of min/max changes; notification of red or yellow inventory status- see next page for complete list

Supplier Managed Inventory Program

Processes after Go Live-FAQ's

What other email notifications are sent to buyers and suppliers?

List of the Email Notification sent with every data import:

- 1. Parts below LSL - Buyer, Supplier

- 2. Parts one day from zero - Buyer, Supplier

- 3. Part above USL with a receipt - Buyer

- 4. Part Limit Change – Supplier

- 5. Part Revision Change - Supplier

Supplier Managed Inventory Program

Processes after Go Live-FAQ's

What other email notifications are sent to buyers and suppliers?

List of the Email Notification sent twice daily:

- 1. New parts added to Nocturne - Buyer

- 2. Parts without associated transaction history - Buyer

- 3. Part data received without supplier - Buyer

- 4. New suppliers added to Nocturne - Buyer

- 5. Parts with negative in-transit balance - Buyer, Supplier

- 6. Parts in-transit was adjusted by supplier - Buyer

Supplier Managed Inventory Program

Keys To Success

- Strong management support for SMI

- Commitment to a long term relationship and joint inventory objectives

- Ability to manage materials in a 3PL environment

- Strong system integration and synchronization

 Capability to translate daily data into alterations to the build plan or logistics flow

- Preferred customer status for Agilent to ensure supplier resource or facility constraints do not impact deliveries

- Demonstrated metrics to monitor the performance of both suppliers and buyers
