

Agilent Statement on Per- and Polyfluoroalkyl Substances (PFAS)

Whether we are providing customers with solutions to ensure food and water are safe, or tools for cancer diagnostics, Agilent's mission is to improve quality of life. Since our founding, Agilent has been committed to responsible business practices, environmental protection and sustainability. Agilent manages a program to minimize potentially harmful materials in our products while ensuring high quality and reliability. We fully recognize the growing global concern regarding the environmental and health impacts of Per- and Polyfluoroalkyl Substances (PFAS) and are dedicated to managing these substances in accordance with current regulations and industry standards. Our approach ensures that we continue to deliver safe and high-quality products while meeting substance control obligations and promoting sustainability across our operations.

PFAS are a family of over 10,000 chemicals that are used extensively throughout many industries, including the life sciences and medical device industries. The global regulatory landscape with respect to reporting requirements and restrictions on PFAS containing products is rapidly evolving. Significant actions have been taken by a number of regulatory authorities such as Environment and Climate Change Canada (ECCC) and United States Environmental Protection Agency (EPA). Agilent reviews our product components that may contain these substances in compliance with global regulations, and will consider changes to our products as we identify new requirements.

Agilent strives to ensure that our operations, products, and services align with relevant environmental, health, and safety regulations. We deploy supplemental controls to meet additional internal requirements for continuous enhancement in environmental sustainability. This commitment involves recycling, reducing waste, conserving resources, preventing pollution, developing environmentally friendly products, managing hazardous materials, achieving net-zero greenhouse gas emissions, and fostering a culture of environmental responsibility.

If you have any inquiries regarding PFAS, please contact gse_inquiry@agilent.com.
