## **Agilent Statement on the Restriction of Hazardous Substances Directive (RoHS)**

Agilent manages an extensive program to minimize potentially harmful materials in our products while ensuring high product quality and reliability. Our products are designed and manufactured to comply with the European Union Restriction of Hazardous Substances (EU RoHS) Directive 2011/65/EU as amended. Agilent works closely with supply chain partners to ensure that products and materials supplied by partners are compliant with regulatory requirements.

The EU RoHS Directive restricts the use of the following ten substances in electrical and electronic products: Lead (Pb), Mercury (Hg), Cadmium (Cd), Hexavalent chromium (Cr VI), Polybrominated biphenyls (PBB), Polybrominated diphenyl ethers (PBDE), Bis(2-ethylhexyl) phthalate (DEHP), Butyl benzyl phthalate (BBP), Dibutyl phthalate (DBP), and Diisobutyl phthalate (DIBP).

Agilent products are classified within the EU RoHS Directive category list either as Industrial Monitoring and Control Equipment (category 9) or In-Vitro Diagnostic Medical Device (category 8). Agilent's compliance with the RoHS directive may include the use of RoHS Exemptions, listed in Annex III and Annex IV of the Directive, that are appropriate to the product and equipment category.

Agilent is committed to ensuring that our operations, products, and services align with relevant environmental, health, and safety regulations. We deploy controls to meet additional internal standards and implement processes for continuous enhancement in environmental sustainability. This commitment involves recycling, reducing waste, conserving resources, preventing pollution, developing environmentally friendly products, managing hazardous materials, achieving net-zero greenhouse gas emissions, and fostering a culture of environmental responsibility.
