Phenols

Application Note

Environmental

Authors
Agilent Technologies, Inc.

Introduction
Gas chromatography using an Agilent CP-FFAP column separates eight phenols in six minutes.
Conditions

Technique: GC-capillary

Column: Agilent CP-FFAP, 0.32 mm x 25 m fused silica WCOT FFAP-CB (df = 0.3 µm) (Part no. CP7485)

Temperature: 160 °C + 7½ °C/min → 220 °C

Carrier Gas: H₂, 30 kPa (0.3 bar, 4.5 psi)

Injector: Split

Detector: FID

Sample Size: 0.1% in CH₂Cl₂

Peak identification:

1. o-cresol
2. phenol
3. o-ethylphenol
4. p-cresol
5. m-cresol
6. 2,3-dimethylphenol
7. p-ethylphenol
8. 2,4-dimethylphenol
