Summary

Bring More Flow to Your Workflows

CDS software can be transformative for chromatography lab operations, maximizing lab efficiency while minimizing cost and complexity.

The question is, which CDS solution can truly deliver on this promise? Which solution can integrate instruments from multiple vendors, automate multiple processes, and protect your lab's data—without a lengthy, unstructured onboarding process?

Look no further than **OpenLab CDS**—a single software system that can help you streamline lab operations from end to end.

With OpenLab CDS you can improve the speed and accuracy of analysis, support working remotely, maintain data integrity and compliance, and adapt quickly to new requirements.

In short, you can put the flow back in your workflows. Now let's take a closer look at the advantages of OpenLab CDS.

“OpenLab CDS provided many benefits to our workflow, including our laboratory operations, our IT support group and ultimately assisted us in delivering Next Gen Data Agility.”

- [Standardize file formats with Allotrope Data Format \(ADF\)](#)
- [Onboard your team faster](#)
- [Networked solutions for your lab](#)

What's more, the scalable, networked architecture of OpenLab CDS can give you faster, better access to instruments and information. Whether your lab has a few instruments or many, OpenLab CDS can scale to meet your needs.

Advantages

Speed Analysis and Review

By eliminating manual data entry throughout the analysis, review, and reporting cycle, **OpenLab CDS accelerates your analysis** while reducing errors and costs. Lab staff no longer has to enter data into spreadsheets and print reports, which improves productivity and morale. Additionally, OpenLab CDS enables you to:

Review large data sets quickly

Visually identify samples of interest, outliers, and artifacts

Use the best integration parameters every time for every one of your analyses

Spend less time performing calculations and interpreting data

Advantages

Take Control of Data Integrity and Compliance

Your lab results are only as reliable as the data they're based upon. Yet the complexities of safeguarding and managing lab data today can be daunting, no matter which industry you're in. An essential step is implementing a data system that is equipped with technical controls that enable you to:

- ✓ **Limit system access:** From a single screen, ensure that only authorized personnel make changes to your chromatography data. Assign roles to provide unique levels of access. Provide a unique ID and password for each user.
- ✓ **Protect records:** Ensure that all raw data, metadata, and result data is stored in a protected location. A checksum confirms whether records are valid, invalid, or altered.
- ✓ **Ensure end-to-end work attribution:** Reconstruct the who/what/where/when/why of every change that took place by recording all user activities in secure, time-stamped audit trails.
- ✓ **Document audit trail reviews:** Confirm and document audit trail reviews in one electronic record, so you can review records and audit trails in parallel.
- ✓ **Use e-signatures that conform to regulations:** Permanently link e-signatures to records and to ensure they're present whenever the records are displayed or printed.

Data quality

In addition to ensuring **everyday data integrity** and facilitating rigorous regulatory compliance, OpenLab CDS also helps improve work quality by minimizing errors and reducing inaccurate results.

Advantages

Eliminate Error-Prone Steps and Improve Work Quality

Sample Scheduler

Performing repetitive manual processes inevitably leads to mistakes. [Sample Scheduler for OpenLab](#) automates the scheduling and assignment of samples, greatly reducing those errors.

Custom Calculator

Similarly, the [Custom Calculator Tool](#) in OpenLab CDS allows you to reliably and automatically compute unique values. This removes error-prone calculation steps and allows you to leverage the traceability capabilities of the software. It's an easy, versatile, reliable alternative to spreadsheets.

Reporting

Now you can avoid errors caused by manually transcribing data to other software. Using [reporting in OpenLab CDS](#), you can generate a simple report file for direct import into your LIMS or other systems.

- [Automate Data Migration](#)

Simple, secure, smooth transition to OpenLab CDS

You can even [automate the migration](#) to OpenLab CDS, preserving result sets, methods, and user and instrument information from legacy ChemStation, OpenLab ChemStation, OpenLab EZChrom, and Galaxie CDS software.

Advantages

Accelerate Reporting

OpenLab CDS also speeds up the reporting process while improving accuracy. Traditional reporting tools tend to be manual with limited formatting and display options. OpenLab CDS provides powerful, versatile capabilities that make report generation fast and easy while eliminating errors and reducing both cost and inefficiency.

There is no longer any need to choose between quicker turnaround times and higher quality in your reporting. With the consolidated, automated workflows OpenLab CDS, you get both.

Advantages

Extend Functionality with Flexible Add-Ons

With OpenLab CDS you have a single software platform that can easily be extended to meet your specific needs with software add-ons such as:

Sample Scheduler Software

Get a shortcut to reliable results. Sample Scheduler for OpenLab is an easy-to-use application that simplifies and speeds sample submission. Optionally, integrate with your LIMS to automate common error-prone and time-consuming mistakes.

GPC/SEC Software

Perform application-specific calibrations and calculations on data acquired with OpenLab CDS. The software supports narrow standard, broad standard, and universal calibrations.

MatchCompare Software

Automate the time-consuming task of comparing quality control chromatograms of complex samples, and objectively compare unknown samples to a known standard.

ADFExport

Store data in a standardized way and increase data integrity, scientific reproducibility, and your ability to find, share, and archive data.

Advantages

Embrace Working Remotely

OpenLab CDS makes it easy to support new ways of working remotely—with confidence in your ability to protect users, devices, and data.

We offer a range of flexible **remote access laboratory solutions**, and OpenLab CDS gives you **virtualization, networking**, and **cloud options** that enable your lab employees to do sample processing, review, and approval securely from home, using a wide range of authorized devices.

Now your lab employees can:

- Run any instrument in any lab
- Process any data from any instrument
- Review/approve any result from any instrument
- Manage all instruments and permissions from a single location
- Access reports and other information from most web browsers

This enables your lab to:

- Increase collaboration
- Cut capital expenditures (CapEx)
- Avoid ongoing maintenance and support for server hardware
- Get additional support when and how you need it

In short, you can keep productivity and morale high by making working remotely a success.

Support & Training

Accelerate Time to Value

Software can only transform your workflows when it's up and running correctly and users are properly trained and supported. Agilent makes this process fast and non-disruptive with a broad range of world-class support and unparalleled training services, including:

- **Customized implementation services:** Get expert assistance to plan and efficiently execute the implementation of OpenLab CDS in your lab and optimize configurations for your specific processes and requirements.
- **Automated software migration:** OpenLab CDS includes tools to preserve result sets, methods, and user and instrument information from legacy ChemStation, OpenLab ChemStation, and OpenLab EZChrom.
- **Automated data migration:** ChemStation and EZChrom users can easily migrate data and privileges to OpenLab using the automated migration tool included in the software.
- **Automated qualification (QualA):** Perform software qualification and verification tasks to ensure your software is operating as intended.
- **Fast, easy onboarding:** Agilent speeds up the onboarding process by providing on-demand, self-guided learning tools to ensure immediate access to all information you need. It also ensures that after onboarding, your team understands how to access and use all the tools they need to get their work done quickly and correctly.

Everyone Benefits

OpenLab CDS brings substantial value to all stakeholders in your lab operations.

For laboratory managers:

- Fewer errors and lower total costs for higher **operational efficiency**
- Single software platform for the entire lab—including single quadrupole LC/MS and GC/MS
 - **Support for mass spectrometry**
 - **Everyday data integrity** that meets international compliance regulations

For instrument users/analysts:

- **Effective onboarding:** Resulting in higher employee satisfaction and productivity processes
- Tools and training to make it easier to learn the system:
 - **Online tutorials**
 - **OpenLab CDS user group webinars**
 - **OpenLab CDS virtual hands-on webinars**
- Affordable classroom training

For IT managers:

- Centralized system administration and management for maximum uptime
- **Networking solutions, virtualization solutions, and cloud storage solutions** for flexible, cloud-based implementation options
- Industry-standard architecture accommodates laboratory growth

Next Steps

Explore OpenLab Software: A Single Informatics Solution for Today's Analytical Workflow

Agilent's OpenLab Software portfolio is an integrated suite of products that improves lab throughput and the quality of your results. These products easily integrate to work together to cover the analytical workflow from the moment the analytical request is generated until the data are archived.

Products

OpenLab CDS – For QC labs who want fast reliable results and focus on data integrity.

OpenLab ChemStation – Flexibility and superior support for method development, capillary electrophoresis, and purification workflows.

OpenLab EZChrom – Provides continuity for current EZChrom customers and supports highly automated workflows.

OpenLab ECM XT – Reliable cloud-ready storage leverages current technologies and meets current security standards.

OpenLab ECM – Designed to operate across multiple sites and suitable for global deployment.

SLIMS – With SLIMS, your lab operations can be completely digitalized, allowing you to easily submit analytical requests, follow procedures and generate reports.

Add-ons

Sample Scheduler
MatchCompare
GPC/SEC
