Ensure Compliance After Your Windows Upgrade

Let Agilent help you cut the cost of revalidating your systems

End of Microsoft Windows 7 Support

After 10 years, Microsoft support for Windows 7 stopped on 14th January 2020:

“After 14 January 2020, Microsoft will no longer provide security updates or support for PCs with Windows 7. Upgrade to Windows 10 now to keep your employees productive and secure.”

Microsoft will no longer provide:
- Technical support for any issues
- Software updates
- Security updates or fixes

This means that companies who continue to use Windows 7 as an operating system will be increasingly vulnerable and at-risk to malware and cyber security issues.

Change management when upgrading to Windows 10

Business continuity is an essential component of GAMP®5 and many companies are upgrading to Windows 10 because of this (in order to reduce the risk associated with Windows 7).

Upgrading the operating platform for a validated system involves a significant level of compliance impact and risk. In most cases, data acquisition and storage software must be concurrently upgraded to ensure that the system operates properly in its new virtual environment.

The software upgrade will be considered a “Change” to the validated system, and the customer’s Change Control Policy must be followed. Assessing the impact of the change in order to understand the level of revalidation that will be required is a critical step to maintaining a compliant, validated state.

Partnering with Agilent can significantly reduce the cost and effort required to revalidate systems. Speak with an Agilent Computer System Validation Services expert today.

Windows Upgrade Paths

There are three (3) main upgrade paths that can be followed to achieve technical and regulatory success. Agilent can partner with customers to assist with all three paths, as illustrated here.

Please note that Agilent can provide test execution services with any of the three paths, but it was only indicated as an example for the longest path in the below diagram.

Agilent Consultancy Services

Agilent employs dedicated compliance specialists who can help assess your overall risk, streamline validation by focusing on high-risk areas, and ensure that your lab continues to comply with industry accepted guidelines and government regulations.
