In this note the installation of the Bio-Inert Solvent Heating Devices (9 µL internal volume, 600 bar max pressure) (p/n G5616-60050) into the Agilent 1290 Infinity TCC (G1316C) is described. The additional solvent heating devices can be arranged in the G1316C in various locations depending on the application needs. Some examples are shown in Figure 1 on page 2.
Installation of the Bio-inert Solvent Heating Devices

**Figure 1** Arrangements of the bio-inert solvent heating devices in the 1290 Series TCC (G1316C)

**NOTE**
If the solvent heating devices are installed in the central position on the TCC’s heat exchangers as shown in Figure 1 on page 2, the column identification system cannot be used.

The solvent heating devices are mounted directly onto the TCC’s heat exchangers.

**NOTE**
Don’t forget to remove the protection foil from the heating transfer pad at the rear of the solvent heating device before installation.

**CAUTION**

Strong force/torque will damage SST cladded PEEK capillaries

Be careful when installing stainless steel cladded PEEK capillaries.

➔ Follow the instructions given in the technical note Installation of Stainless Steel Cladded PEEK Capillaries. (p/n G5611-90120).
