Description
Multi Affinity Removal Column Human-14 is packed with affinity ligand-modified resin that simultaneously removes human albumin, IgG, α1-antitrypsin, IgA, transferrin, haptoglobin, fibrinogen, α2-macroglobulin, α1-acid glycoprotein, apolipoprotein A-I, apolipoprotein A-II, IgM, transthyretin, and complement C3 from human biological samples, such as serum, plasma, and cerebrospinal fluid. (Depending on the source of plasma sample and preparation/handling of that sample, fibrinogen depletion efficiencies have been observed to range from 92–99%.)

Each column has a unique serial number that indicates when the column was packed, and the lot number of Human-14 (Hu-14) resin listed on this certificate indicates the lot of Human-14 resin that has been packed into the column.
